

ENERGY MANAGEMENT POLICY

WE AIM TO IMPROVE ENERGY EFFICIENCY AND ENERGY MANAGEMENT WITH CREATIVE LIGHTING SOLUTIONS AND INNOVATIVE HIGH QUALITY PRODUCTS.

Our vision is to contribute to the quality of illumination and its positive impact on energy efficiency and energy savings, while contributing to the energy management through the established management system, according to the requirements of standard ISO 9001.

We accomplish this by:

- Identifying all aspects that can influence energy performances;
- Leadership role of management and inclusion of all employees in order to use their creative potential;
- Planning, maintaining and improving the implemented system;
- Managing energy according to the standard ISO 9001 AND 50001, while taking care of compliance with legal and other requirements;
- Defining and obeying the rules and instructions not provided through legal requirements, but which have an effect on energy management system;
- Taking preventive actions in order to constantly improve energy management and avoid unnecessary energy consumption;
- Saving the resources and energy, by constantly improving energy management and avoiding unnecessary energy consumption;
- Considering the opinions and suggestions and exchange of information about possible energy savings of all stakeholders and
- Continuous education and professional training of all employees.
