

RF77 Ice Cream Barrel Graphics Template

Typical application is using 3M IJ180mC-10 with gloss laminate or similar. Graphics should be designed and will be applied as a single panel. Resolution should be 1:1 at the sizes given below and saved in EPR, AI, or PDF (at 1:1). Designers should avoid placing critical graphics (e.g. phone numbers, addresses) within 1-2" of edges to allow for adjustments during the application process and overlap of right and left edges. You may add a frame or edge border to the design, but do not add a border line to the graphic itself (i.e. if a fine line is used as an aid to design work be sure to remove it when done).

Content Design Considerations

- Fully utilize the space available
- Only about one-half of the barrel will be visible from any given direction
- Barrel may be turned during use so the "front" may not always be visible
