Upgrade Your Concrete Finish With Resodyn Polymeric Finishes

Concrete walls and finishes have been around for decades, however solutions for their wear and tear, or uninspiring appearance have not. Common concrete issues like roughness, cracking, pocking, surface degradation, and various staining can affect surfaces as soon as the curing process is complete

Resodyn Polymeric Finishes are the newest and most advanced product for concrete finishes and resurfacing. Using Resodyn Polymeric Finishes creates a strong, low maintenance, durable finish with a 10 year warranty.

Environmental Benefits :

- Ready to use as immediately
- Seals small leaks on existing surfaces
- Seals wall surfaces and won't leach elements
- Reduces noise levels
- Anti-graffiti properties

Polymeric Coating Benefits

Color and Consistency: Most common coatings, i.e., paints, which release VOC's, can be difficult to apply consistently, and can degrade quickly.

Our polymeric finish is easily applied, creating a solid look and feel with minimal color variations. There are no dangerous VOC's to impede work in enclosed spaces.

Our polymeric finishes will not deteriorate or appear stained over time. Resodyn polymeric finishes cover many surface imperfections and actually seal small cracks in the surface. (and can prevent new ones from developing!)

Installation: Resodyn Polymeric Finishes can be easily applied to various surfaces. This extremely durable product does not need any chemical curing. Completely portable equipment for any jobsite.

Ready to use immediately: Resodyn Polymeric Finishes cool quickly, and eliminates the time and expense of post-pour surface treatments, reapplication, and maintenance.

Durability: Resodyn Polymeric Finishes prohibit outside element penetration, i.e., salt and acidic rain into concrete. Our 10 year warranty is one of the best in the industry.

Concrete Surface Coating Solutions

Resolve common cement and other base material issues with Resodyn Polymeric Finishes. Fix cracks, surface degradation, staining or just upgrade the appearance of concrete. Resodyn's polymeric coating will repair and beautify surfaces from parking garages to swimming pools.

Simple, Durable, Non-staining

Resodyn Polymeric Finishing Systems are the most unique and simplified surface coating products to come along in years. Tiny thermoplastic particles are deposited on your sealed surface through a heated zone, rendering the material just soft enough to adhere to the surface and each other. This creates an attractive, solid, waterproof, wear and stain resistant surface. Available in solid and blended color combinations, our coating applications require no special oven, no curing, and virtually no maintenance.

Unmatched Performance

- Zero VOC
- Minimal facility downtime
- No strong chemical odor during application
- Non-toxic raw materials
- No pot life or shelf life limitations
- Ease of color change
- Easy surface repair
- Moisture barrier helps seal small cracks
- Minimal overspray easily cleaned up
- Superior chemical resistance
- Thick build with fewer application layers
- Resistant to temperature and humidity

Make your Surface Durable and Attractive

Our thermal polymeric surface finishing system is the most innovative and advanced product to hit the surface coatings industry.

This polymer coating has an extremely durable finish that completely seals the original surface from chemical absorption and chemical leaching while resisting U.V. and organic staining.

The fluid nature of the polymer coating completely covers and seals surface porosity and troublesome cracking, making it an ideal solution for refurbishing existing surfaces or new installations.

Our thermal polymer finishes have a 10 year warranty and are available in several colors to complement any surface.
