

## TECHNICAL BULLETIN | RE: Decks Fastener Installation

### PRODUCTS COVERED

Decks Acoustical Panels

### Installation

1. Decks Fasteners are designed to accommodate panel thicknesses up to 1". For panels under 1" thickness, there will be a space between the panel back and furring or overhead deck surface.
2. T-drive #15 bit required (supplied by others).
3. Self-drill feature for wood or 25-gauge or lighter metal. Metal gauges heavier than 25 gauge may require pre-drilling pilot holes.
4. For wood or metal attachments, set screw gun clutch appropriately to avoid over-drilling fastener. The non-threaded portion of shank is designed to prevent over-drilling IF screw gun clutch is set properly.
5. Decks Fasteners are NOT intended for direct attachment to gypsum. Additional furring is required.
6. Recommended number of fasteners per panel:
  - 6 fasteners per nominal 2x4 panels
  - 4 fasteners per nominal 2x2 panels
7. Use care to avoid dirt and debris transfer to panel edges and surfaces.
