

## TECHNICAL BULLETIN | RE: ChromaTints™ Sound Absorption

**PRODUCTS COVERED:** Acoustical ceiling tiles painted as ChromaTints™ custom color acoustical ceilings.

Acoustical ceiling products painted in the ChromaTints™ program are processed in a controlled factory environment where paint application is precisely calibrated for consistency in visual appearance and to minimize losses in sound absorption. While it would be impractical to test every possible combination of paint color and base ceiling type, third party independent testing for sound absorption in accordance with ASTM C 423 on a leading manufacturer's standard NRC 0.70 ceiling panel painted with a custom flat color resulted in NRC = 0.70 (i.e., same as original tile).

While there is no guarantee of "zero loss" in NRC across every possible combination of color and base tile, should losses occur they would be expected to be negligible.
