## Beef Sires

- 4 Angus
- 40 Hereford
- 46 Simmental
- 56 Red Angus
- 60 Charolais
- 64 Club Calf
- 64 Main-Anjou
- 65 Shorthorn
- 66 Gray Brahman
- 67 Red Brahman
- 68 Brangus
- 68 Santa Gertrudis
- 69 Gelbvieh
- 69 Limousin
- 70 Wagyu
- 76 Sire Index

## Educational Topics

- 24 Genetic CatalyST
- 35 Angus Top Trait Leaders
- 36 Ecofeed®
- 38 What is SuperConventional™?
- 39 CEMmaternal, Branded Beef, EcoFeed Beef, SIMplify, & Amplify
- 45 Ultraplus™
- 54 Whole Herd Approach
- 71 ULTRAFertility™
- 72 Optimize Sexed Semen Success
- 73 Sexed Semen Protocols
- 74 Beef Heifer Protocols
- 75 Beef Cow Protocols

## Beef Team

- 3 Beef Independent Sales Representatives
- 80 Beef Team & Call Center

**Ultraplus™**

*Add certainty to your breeding decisions.*  
Utilize the newest gender-sorted semen technology with the most innovative improvement in the sorting process.

**4M™**

*Advanced sex-sorted semen.*  
Create a customized herd with the sex-sorted semen that brings certainty to your breeding decisions.

**STyle genetics™**

*Generate show ring success.*  
Utilize sires who place an extra emphasis on structure, production, pedigree, and elite phenotype.

**Ultra Fertility™**

*When Conception Matters Most.*  
Maximize conception rates and breeding efficiency with proven, highly recommended sires for Fixed Time AI protocols, embryo transfer, and Sexed semen superiority.

*Pulmonary Arterial Pressure (PAP).*  
Identify sires who maintain a lower PAP score to produce progeny with reduced risk of contracting High Altitude Disease (HAD).

**Ecofeed®**

*Premier index to increase profitability and sustainability.*  
A feed conversion index based on progeny testing to identify efficient animals that consume less and produce more.

- One of the great proven sires in our lineup, depend on Emerald to improve udder and foot quality in a quick-shed ding package that works great on fescue.
- Among all the Confidence Plus sons in the Angus population, no other bull rivals Emerald's blend of proven production traits with BW accuracy over 0.95 and carcass progeny on his record.

**FRESH PEDIGREE  
& MATERNAL  
EXCELLENCE**

- Armstrong provides exactly what many breeders are seeking... outcross pedigrees with a focus on structure and proven maternal traits. He excels for foot quality, docility, PAP, and a host of other traits.
- His individual ratios show BW at 85, WW at 115, YW at 11, IMF at 116 and RE at 103 in a contemporary group over 100 head.

# CONNEALY *Commerce*

AAA 20132642  
551AN01798

- Commerce is the powerfully built Connealy sale feature that elicits a new wave of fans each time people see him. He is as wide as they come with a massive rib cage, big feet, and an unforgettable presence.
- His mother is described by Jerry Connealy as a “broody Cade daughter with a perfect udder” and they have sampled Commerce heavily.
- In very large contemporary groups, Commerce ratioed 103 for BW, 123 for WW, 125 for YW, 185 for IMF and 110 for RE.

HOFFMAN THEDFORD

- The first Thedford calves are yearlings and there is a lot to be excited about with this junior sire. His heifers are feminine and correct, and his bulls are stout and masculine.
- Thedford is a docility improver, will add a notch of stature, and loads of performance to a calf crop.

CONNEALY *Craftsman*

AAA 20132505  
551AN01799

- Craftsman is the historic record-setter from Connealy's in 2022 and the first bull in their history to be used before their sale. This unique sire offers a relevant genetic profile that will boost HP and \$M in a big hipped, attractive package.
- In a contemporary group approaching 300 head, Craftsman ratioed 105 for BW, 120 for WW, 119 for YW, 154 for IMF and 107 for RE.
- Craftsman is a prolific semen producer and made large amounts of conventional and sexed semen early in his career.

**MUSGRAVE 316** *Exclusive*

- If proven genetics for great maternal performance are a priority for your breeding program, Exclusive is one of the most valuable breeding tools you can find in modern Angus genetics. He will reliably add teat and udder quality, fleshing ability, and functional longevity.
- Exclusive is the kind of bull selective breeders appreciate seeing in a pedigree as a signal for maternal excellence and customer satisfaction.
- A wide-based, impressive individual from the ground up, Exclusive is the proven power bull breeders use to uplift maternal excellence in a breeding program.

# MYERS Fair-N-Square M39

AAA 19418329  
551AN01619

- Without question, Fair-N-Square is a breed changer for adding foot quality, base width, and body density.
- When you tie into Fair-N-Square, you instantly add the fertility and longevity of his proven cow family that has worked on fescue for generations.
- Fair-in-Square can remedy many of the concerns Angus breeders are discussing- feet, fertility, fleshing ability and longevity.

POSS *Rawhide*

AAA 19416968  
551AN01647

- Rawhide is becoming a legend for consistently generating big bodied progeny that offer a broody look with potent genetic merit and outstanding salability. Most would agree he has matured into one of the most demanded bulls in the Angus breed.
- Creating continued excitement, Rawhide progeny topped numerous sales in 2022, including the high-selling \$100K sale feature at Riverbend.
- His outstanding progeny data now with over 1,300 BW records ratioing 99 and 101 for WW and YW, have breeders circling back to use this breed leading sire.

# 4M Blockade 120

AAA 20133960  
551AN01802

- If you are looking to add muscle, stoutness, and power, look no further than Blockade. As a maternal power bull with a massive hip, Blockade offers loads of breed character and was the 2022 sale feature from 4M Angus.
- As one of the highest \$M Barricade sons in the breed, use Blockade to improve foot quality, HP and HS, while adding pounds in the right package.
- Combining tremendous structure and exceptional dimension, Blockade is a big scrotal bull sure to add power to a calf crop.

# genetic<sup>TM</sup> ♀ catalyST

Providing superior genetics, whether purchased or raised, is a responsibility we take serious at STgenetics®. The bulls that will carry the Genetic CatalyST brand will represent a studied, thoughtful approach that considers many aspects of seedstock and commercial beef cattle production. Among the many elite animals we create each year, a couple might be unique enough to place in the commercial environment for your consideration. These will be called Genetic CatalyST Sires.

These sires will offer the following:

- Excellent foot quality and structural integrity
- Result of proven dams with a record of outstanding progeny performance
- Superior physical build with the rib shape and base-width to thrive in many environments
- Balanced genetic profiles that will offer multi-trait genetic improvement in one generation
- Genomically-enhanced EPD profiles and free of all known genetic recessives
- Field-proven, high-fertility semen

THE BEST WAY TO PREDICT  
THE FUTURE IS TO

*Create it*

- Talk to anyone who has used Maternal Made, including Jerry Connealy, and ask them about the daughters in production. You will need to look no further for tremendous cow power.
- Take advantage of the last remaining semen on Maternal Made this year as his inventory will likely sell out in 2023.

DAM: DPL SANDY 3040

DAUGHTER: DAL PORTO, NE

- The first calves of Perspective caught the attention of respected evaluators and excitement continues to build on his potential.
- With a pedigree different to many of today's popular show sires and the maternal backing of his iconic dam, DPL Sandy 3040, Perspective is a perfect mating for First Class descendants.

# Ecofeed®

A premier index designed to increase profitability and sustainability by reducing feed costs and decreasing the carbon footprint of cattle.

Ecofeed® is a feed conversion index based on progeny testing to identify animals who are good for your feed bill and the environment!

- Efficient animals **CONSUME LESS** while **PRODUCING MORE** than expected at any given body size and level of performance.
- Efficient feed conversion results in using fewer feed resources, less waste and manure, and reducing the carbon footprint.

Whether you are feeding cattle for finish or production, feed represents one of the largest variable input costs in your operation. Based on data collected, animals with high feed conversion efficiency consume 17% to 24% less feed than their inefficient counterparts, with similar body size and level of production. Isolating the genetic components affecting feed conversion efficiency allows you to decrease feed costs and increase environmental sustainability, with high performance animals who improve your profitability.

### What happens when feedlots can predict genomic value?

VARIABLES	LOW GENOMIC	HIGH GENOMIC
In Weight (lbs)	400	400
Out Weight (lbs)	1,450	1,450
Cost of Gain (\$)	<b>\$1.68</b>	<b>\$1.45</b>
Feed Costs (\$)	\$1,764	\$1,523
Revenue (\$)	\$2,030	\$2,030
Feeder Break-even (\$)	\$266	\$508
<b>GENETIC ADVANTAGE</b>	<b>\$242.00</b>	

High genomic calves had a **\$240 profit advantage** over low genomic calves!

Ecofeed® by STgenetics® enables producers to positively impact an animal's carbon footprint prior to birth and reduce the input cost of beef production.

Environmental sustainability in agriculture is paramount as demands on our natural resources increase. Decreasing tillable land affects costs of feed and grazing, while drought affects crop irrigation and grazing. Selecting animals based on feed conversion efficiency plays an important role in the environmental sustainability strategy of your operation, because efficient cattle consume less while maintaining the same, or higher, level of production on less resources.

The Ecofeed® Index uses a measure of feed conversion efficiency known as residual feed intake (RFI). RFI measures the difference in actual compared to expected feed intake based on what's needed to support and maintain the performance of each animal. Efficient animals consume less at any level of performance and body size. With an estimated heritability of 0.24, progress can be made each generation with increased selection pressure on efficient animals.

Genetic Development Center® research shows high feed conversion animals consumed 4 lbs. less per day, or 1200 lbs. less across a 300-day feeding period, compared to inefficient counterparts. A ration cost of \$0.12 per lb. of dry matter equals a feed cost savings of \$144.00 for high feed conversion animals, with no impact on performance or days to feed (Figure 1).

Average daily gain (ADG) and feed conversion efficiency demonstrated the top 25% of animals for growth and feed conversion consumed 2 lbs. less feed and gained 0.9 lbs. more per day than the bottom 25% of animals. These superior animals went from 400 lbs. to 1,350 lbs. 94 days sooner, while requiring 2,610 lbs. less. As a result, these animals had a higher net profit of \$346.10 due to lower input costs during feeding period (Table 3).

## Low Ecofeed®

Feed Intake: 23 lbs/d DM  
Feed Cost: \$0.12/lb DM  
Feed Cost: \*\$828

## High Ecofeed®

Daily Feed Intake: 2 lbs less DM/day  
Growth: 0.9 more lbs/day  
Finishing: 94 days sooner  
Total Feed: 2,610 lbs less DM  
**Total Cost Savings: \$346.10**

# INTRODUCING SuperConventional™

## Strategic Gender Blends from STgenetics

- 75% or higher gender accuracy
- Superior fertility in Fixed-Time AI
- Competitively priced for Commercial applications

**STgenetics® is proud to announce our NEW program, SuperConventional™!**

The SuperConventional program includes **strategic gender blends** containing **genetics from multiple** STgenetics Beef sires combined into one straw. These products are specifically **designed for the commercial beef sector**, where **controlling calf gender provides the opportunity for added value** (see pg. 54-55 for more details).

Available in multiple breeds, SuperConventional blends provide the opportunity to **change the gender ratio of a calf crop** using a **high fertility** product designed to meet a variety of marketing goals and **maximize potential earnings** for commercial operations. Utilize SuperConventional strategic gender blends to create a breeding plan for your program that will have a lasting **impact on your bottom line!**

### SuperConventional™ Field Trial

University of Kentucky  
Evaluated in Fixed-Time AI Settings

Farms	Conceived AI	Total Inseminated	AI Conception Rate
7	144	250	58%

Using these values, SuperConventional would result in 36 more calves of the desired sex compared to conventional semen on average.

“ EVERY  
PREGNANCY  
HAS A  
PURPOSE! ”

# CEMaternal

An Angus FEMALE blend designed for breeding virgin heifers with a focus on calving ease and superior replacement female merit. Contains sires in the top 25% or better for calving ease and top 10% or better for \$Maternal. All bulls in this blend have proven dams with superior fertility, feet, and udder quality.

## Genetic Profile of the CEMaternal Blend

# Introducing Ultraplus™

STgenetics® new gender-sorted semen technology

## FEMALE

- **Maximize** the **reproductive performance** of your herd's top end.
- **Increase** your herd's **maternal excellence, fertility, and longevity.**

## MALE

- **Magnify** the **production performance** and **bottom-line** of your herd.
- **Increase** you herd's **payweight, profitability, and efficiency.**

As the global leader in sorted semen technology, Sexing Technologies® is proud to announce Ultraplus™, our newest gender-sorted semen technology. Ultraplus™ adds the most innovative improvement to the sorting process resulting in the highest conception rates ever seen in the beef and dairy industries. Available at 90% or higher gender accuracy, Ultraplus™ is designed to meet the growing demand of gender-sorted semen.

*“Ultraplus™ represents the next tier in our continued commitment to bringing the most reliable, technology-driven solutions to the industry. It goes FURTHER BEYOND our original semen sorted technology to bring the highest conception rates in the history of this product to help our customers meet their profitability and sustainability goals.”*

*Juan Moreno, Chief Executive Officer, Sexing Technologies®*

## Ultraplus™ Conception Rate Gain

**14%** better than the first

**3%** better than the best

**TRUST THE LEADERS IN SEXED SEMEN TECHNOLOGY!**

Contact your local sales representative for questions about the new Ultraplus™ product.

- Epic stands among the greats within the Simmental population for his combination of elite fertility, proven calving ease, and breed-leading performance.
- He is a true dual-purpose sire that can be confidently plugged into large commercial heifer projects or used to generate sale-topping, purebred replacements, and herd bull prospects.
- Epic offers superior fertility and can be trusted to generate significant value to your herd. It's hard to find another Simmental sire who pairs genetic advancement with phenotypic upgrades like this breed changer.

EPDs as of 12/9/2022

• Sired by the now-deceased Pays to Believe and backed by a full sister to Loaded Up, Hitman has power in the blood. Both sides of his pedigree are stacked with show ring success, powerful donor females, and heavily used stud bulls.

• His first offspring have been extremely high-quality and are sure to be standouts within the show circuit, but if they stay true to their pedigree should hold the most value in production.

# WHOLE HERD APPROACH

## USING

# Gender Control

Whether your market is at weaning, background, or finish you can capture more pounds and value by skewing the gender ratio of your calf crop using high fertility sex-sorted semen.

At 550 lbs. the price spread is \$22/cwt or 13% higher for steers vs. heifers. This graph represents that heavier calves are worth more on a per head basis even though they sell at a lower price per pound!

Sexed semen research has traditionally been aimed at differences in conception rates versus conventional semen, but never the next step which is extremely important - gender control. Through understanding and incorporating gender control you can increase revenue potential, because heavier steer calves are simply worth more!

AUG. 2022 CLOSEOUT	NO. OF HEAD	IN WEIGHT (LBS)	OUT WEIGHT (LBS)	AVG. DAYS ON FEED	AVG. DAILY GAIN (LBS/DAY)	FEED:GAIN (DRY BASIS)	DEATH LOSS (%)	AVG. COST OF GAIN (\$/CWT)
STEERS	38,069	766	1439	3.61	180	6.02	2.06	129.41
HEIFERS	25,912	736	1296	3.14	169	6.52	2.72	142.18
STEER ADVANTAGE		30	143	0.47	11	-0.5	-0.66	-12.77

(Table 1)

## FOCUS ON FEEDLOTS

Focus on Feedlots was created in 1990 at Kansas State University to provide basic feedlot performance data for steers and heifers, and feed ingredient prices. Monthly closeout data from various feedlots are summarized to provide average values for several variables. The closeout data report from August 2022 displays data collected from 63,981 head of cattle and demonstrates the increased performance of steers versus heifers in feeder cattle (Table 1).

(Table 2)

	NO. OF HEAD	200-DAY ADJUSTED WEIGHT (LBS)	ESTIMATED VALUE (\$/HD)
CHAROLAIS STEERS	154	601.1	\$975
ANGUS HEIFERS	135	501.1	\$760
STEER ADVANTAGE		100	\$215

## ODDE RANCH GENDER-CONTROL RESEARCH

The Odde Ranch in Pollock, South Dakota has continued to participate in a field trial with STgenetics® to evaluate the use of gender-selected semen in a commercial cow-calf setting. The objective of this trial is to evaluate the use of gender-selected semen by using sexed male semen on mature cows of terminal Charolais sires to implement crossbreeding and maximize pounds. Additionally, sexed female semen is used on yearling heifers and 2-year-old cows of maternal Angus sires to generate replacement females (Table 2).

“ Since steers are more feedlot efficient and have heavier carcass weights, industry efficiency could certainly be improved by skewing the number of commercial heifers produced in the direction of producing more steers. The increasing value of steer calves relative to heifers provides a potential opportunity to add value to the calf crop by increasing the percentage of steer calves produced.

- Dr. Kenneth G. Odde, Odde Ranch and Professor Emeritus, Kansas State University ”

# GENDER CONTROL USING

## Sexed Female

### MATERNAL

- ANGUS
- RED ANGUS
- HEREFORD
- BRAHMAN
- BRANGUS
- SHORTHORN
- OTHER

Use Ultraplus™ Female semen to make F1 replacements using your choice of two maternal breeds. These crossbred females excel for mothering and fleshing ability, milk, marbling, fertility, and longevity.

#### BENEFITS OF CROSSBRED FEMALES<sup>1</sup>

- FERTILITY**
- 6% HIGHER CALVING RATE**
- LONGEVITY**
- 38% INCREASE OVERALL**

#### PRODUCTIVITY

- 4% HIGHER CALF SURVIVAL**
- 8% INCREASE IN EFFICIENCY**

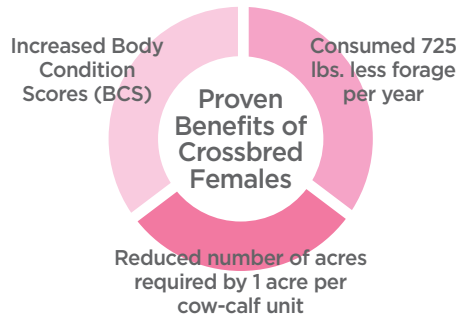

#### PERFORMANCE

- 23% HIGHER LIFETIME PRODUCTIVITY**

“RESEARCH STUDY FAVORS THE BALDY FEMALE.”  
-DR. DAVID LALMAN, OKLAHOMA STATE UNIVERSITY

Dr. David Lalman and his team at Oklahoma State University (OSU) conducted an experiment to determine the potential reduction of annual cow maintenance costs with Hereford-sired black baldy cows compared to straight-bred Angus cows. The OSU researchers conclude that simple, planned crossbreeding systems using breeds that compliment one another can reduce the cost of maintaining a cow herd, and increase ranch output through improved longevity and fertility.

### BLACK ANGUS COW + HEREFORD BULL Sexed Female = CROSSBRED BALDY FEMALE

“The improvement you get in fertility and longevity is still viable in crossbred animals. It’s not a free lunch in the cattle industry, but it’s as close to a free lunch as you’re going to get.”

-Dr. David Lalman  
Oklahoma State University

# GENDER CONTROL USING

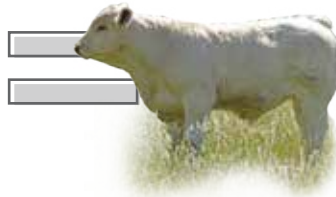

## Sexed Male

### TERMINAL

- HIGH \$B ANGUS
- CHAROLAIS
- SIMMENTAL
- LIMOUSIN
- GELBIEH
- WAGYU
- OTHER

Use Ultraplus™ Male semen to make market steers using your choice of one terminal sire. These steers excel for rapid growth, feed conversion, carcass quality, and profitability.

#### BENEFITS OF CROSSBRED STEERS<sup>1</sup>

- PRODUCTIVITY**
- 4% INCREASE CALF SURVIVAL**
- PERFORMANCE**
- 6% INCREASE IN POST-WEANING GAINS**

#### POUNDS

- 5% INCREASE IN WEANING WEIGHTS**

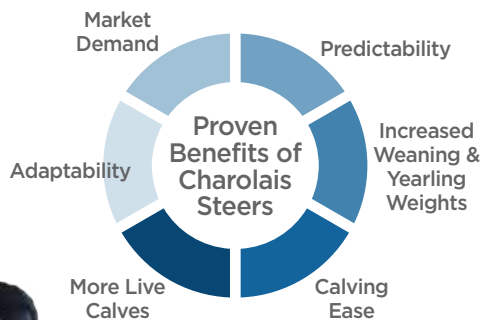

#### EFFICIENCY

- 3 WAY CROSS**
- MAXIMUM HETEROSIS**

### CROSSBRED BALDY COW + CHAROLAIS BULL Sexed Male = CROSSBRED CHAROLAIS STEER

“Capturing the advantage of this profit can be as easy as pulling a different straw of semen from your tank!”

-Tom Moore, Kentucky

### WHY NOT USE A CHAROLAIS BULL?

“If your goal, as a beef producer, is to market a calf with wide market acceptance then why not use a Registered Charolais bull? In a recent analysis of seven years of extensive Superior Livestock video auction marketing data including more than two million head of cattle, Charolais sired steer calves outsold all other English-Continental breed cross steers by \$3.73/cwt.”

-McCabe, 2018. KSU

## HETEROSIS EFFICIENCY

Creating a whole herd approach increases production efficiency by generating heavier calves, with the same number of cows and on the same amount of land.

**MULTI-TRAIT**  
*Excellence*

- With growth and carcass traits well into the top percentiles of the breed, it is easy to see that Fortune is a powerful, high-growth sire that will produce scale pounding calves.
- Fortune is extra wide-based, and the heaviest WW Authority son ever produced at LT Ranch. Use him with confidence in a terminal sire crossbreeding system.

# LT Countdown 9712 PLD

Homozygous Polled

AICA M928753  
551CH01519

- A standout from birth, Countdown is admired for his bold rib, structural correctness, and incredibly sound structure on the move. He brings a tremendous EPD package to the table with his unique combination of calving ease, growth, and carcass excellence.
- He is from a beautiful two-year-old that stems from generations of maternal excellence and with her excellent foot and udder quality it is no wonder he is seeing heavy use at LT Ranch.
- Countdown's maternal line is difficult to rival with a sire stack of proven genetics that will yield superior performance, efficiency, and maternal power.

• As one of Brent Thiel's features in the 2022 LT sale, Justified was admired by many astute cattlemen for his fusion of body mass, maternal power, and genetic script. Born at a modest BW, he's grown into a powerhouse who commands attention.

• Justified is backed by a tremendously deep-sided, big-ribbed Ledger daughter with a beautiful udder that radiates maternal excellence. His dam was LT's pick of the Hubert Charolais females and one of the finest in the breed.

# OPTIMIZE SEXED SEMEN SUCCESS!

ACCEPTABLE  
BREEDING  
TIME: 16-24 HRS

IDEAL BREEDING  
TIME: 18-22 HRS

## BREEDING TIPS TO ACHIEVE MAXIMUM

**Ultraplus™** CONCEPTION RATES

### UTILIZING ESTRUS DETECTION AIDS WITH SEX-SORTED SEMEN

#### FIXED-TIME AI

- Apply estrus detection aids at CIDR removal.
- Activated Patches = AI Sexed Semen
- Non-Activated Patches = AI Conventional Semen

Standard Timepoint  
for Fixed-Time AI

#### SPLIT-TIME AI

- Apply estrus detection aids at CIDR removal.
- First Timepoint: Activated Patches = AI Sexed Semen
- Second Timepoint (24h delay):
  - Activated Patches = AI Sexed Semen
  - Non-Activated Patches = AI Conventional Semen

First Timepoint  
for Split-Time AI

Delayed Timepoint  
for Split-Time AI

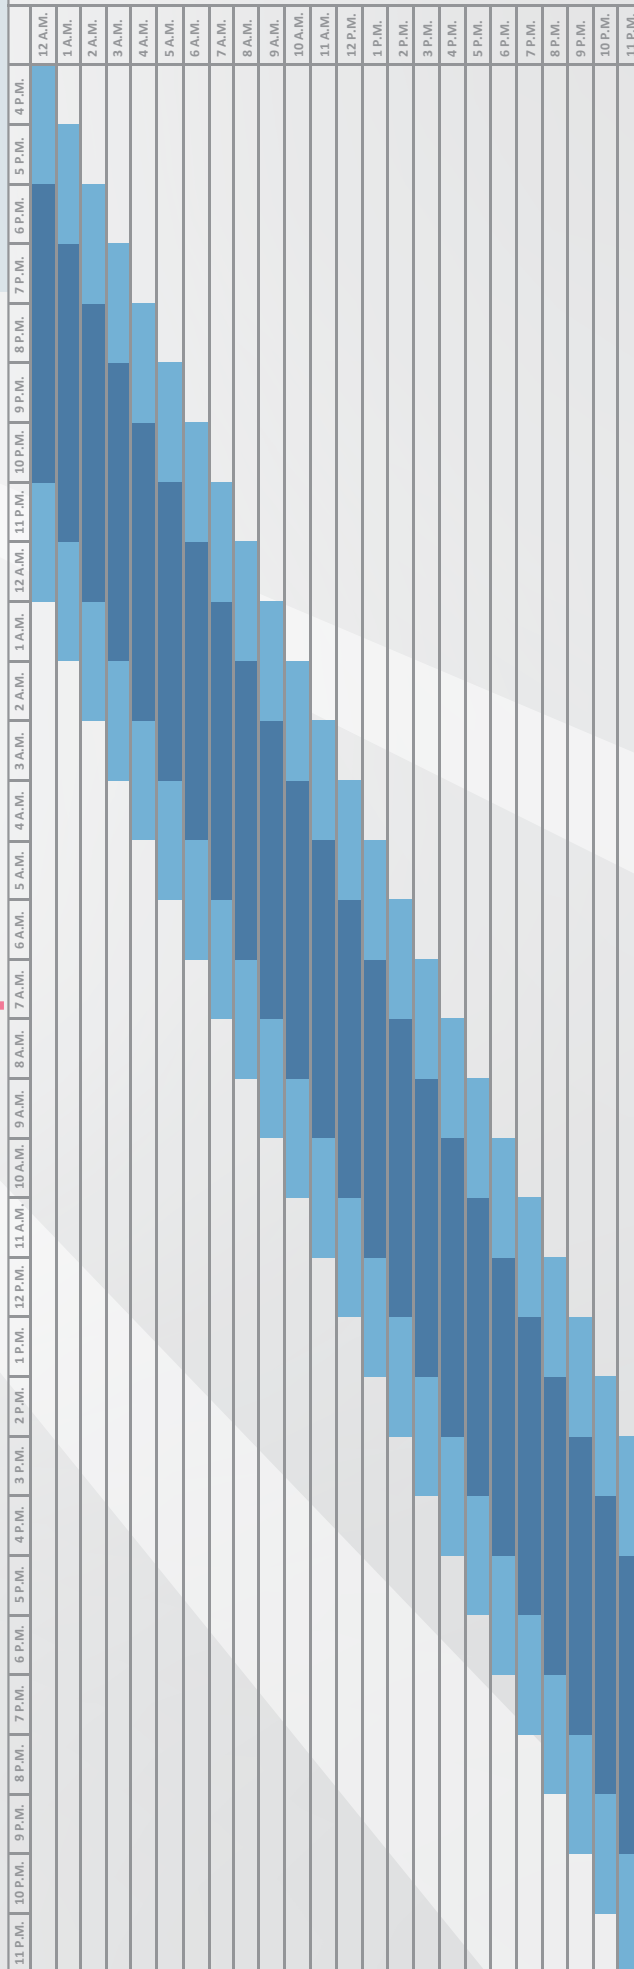

...24 hrs

### SIGNS TO LOOK FOR DURING HEAT PERIOD

HEAT PERIOD	EARLY COMING INTO HEAT	MIDDLE STANDING HEAT	LATE COMING OUT OF HEAT
BEHAVIOR	Mounds other cows; Bawling; Pacing fence; Aggressive; Head-butting	Stands to be mounted; Mounds others; No appetite; Restless	Will not stand to be mounted; Regaining appetite; Decreasing signs of restlessness
GENITALIA	Lips of vulva slightly swollen	Lips of vulva swollen and shiny	Swelling decreased
DISCHARGE	Very little, watery mucus	Abundant, Clear mucus	Decreased; thick, rubbery mucus
TAILHEAD/RUMP	Little changes	Ruffled	Matted down; Possibly rubbed off

### ONSET OF STANDING HEAT

PREFERRED TIMES TO BREED WITH **Ultraplus™**

# SEXED SEMEN

# Protocols

## HEAT DETECTION

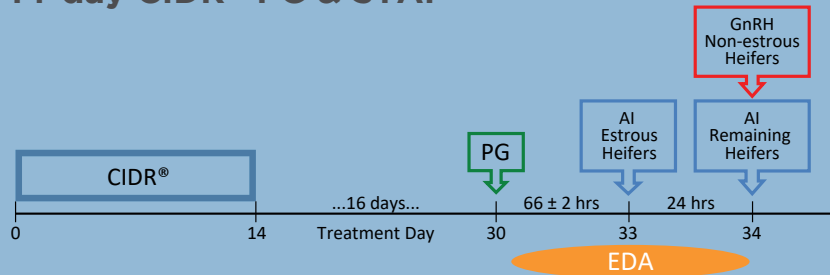

Sexed semen can be used on any female observed in estrus (heat) and following synchronization with any protocol on PG 74-75. For best results with sexed semen, perform AI 18 to 22 hours after detecting females in estrus. Use of estrus detection aids (EDA) is highly recommended (See PG 72).

## SPLIT-TIME AI (STAI)

Perform first TAI 66 ± 2 hrs after PG in estrous females. GnRH administered at second TAI only in non-estrous females. Females detected in estrus by first or second AI receive Sexed semen. Females that do not come into estrus receive Conventional semen at second AI.

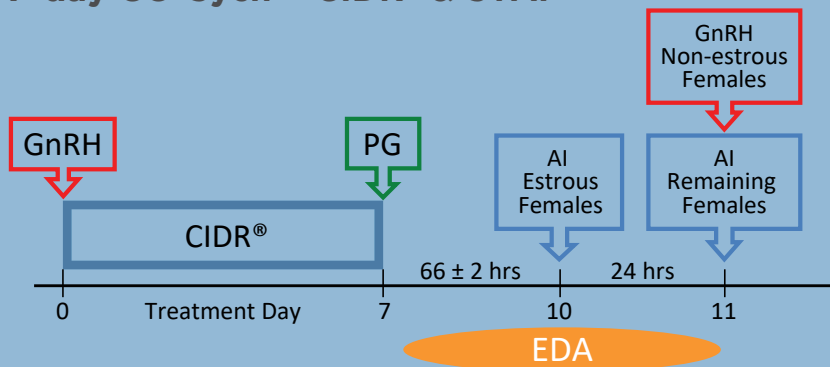

### Heifers only

#### 14-day CIDR®-PG & STAI

### Cows and/or Heifers

#### 7-day CO-Synch + CIDR® & STAI

**EDA** Aervoe™, AIPaint™, Detect-her™, Estrotect™, Kamar™, Mark-her™, Paintstik™, Quick Shot™, Tell Tail™, Twist-Stik™

**GnRH** Cystorelin®, Factrel®, Fertagyl®, OvaCyst®, GONABreed®

**PG** estroPLAN®, Estrumate®, In-Synch®, Lutalyse®, Lutalyse® HighCon, ProstaMate®, SYNCHSURE™

These protocol sheets were assembled by the **Beef Reproduction Task Force; BeefRepro.org**. Programs are intended to promote sustainable food production systems by the beef industry

through sound reproductive management practices for replacement heifers and postpartum cows. The Beef Reproduction Task Force recommends working with a licensed veterinarian for proper use and application of all reproductive hormones. **Approved 11-17-22**

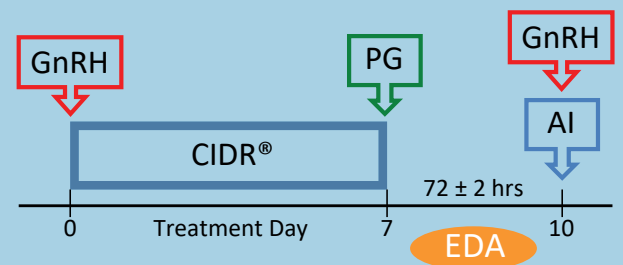

## FIXED-TIME AI (FTAI)\*

To optimize pregnancy success, it is recommended to use Sexed semen on females that have exhibited estrus before FTAI and Conventional semen on females that have not exhibited estrus.

### Heifers only

#### 7-day CO-Synch + CIDR®

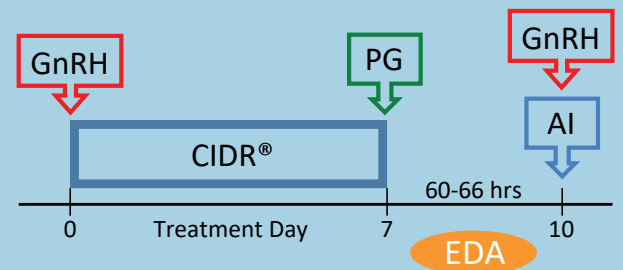

Perform TAI at 72 hrs after PG with GnRH at TAI.

### Cows only

#### 7-day CO-Synch + CIDR®

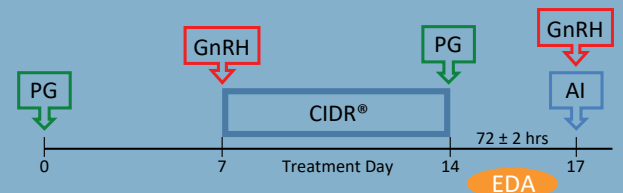

Perform TAI at 60 to 66 hrs after PG with GnRH at TAI.

### Heifers only

#### PG-7 7-day CO-Synch + CIDR®

Perform TAI 72 ± 2 hrs after second PG with GnRH at TAI. Heifers in estrus receive Sexed semen, heifers not in estrus by TAI receive Conventional semen

\*The time listed for "Fixed-time AI" should be considered as the approximate average time of insemination. This should be based on the number of females to inseminate, labor, and facilities.

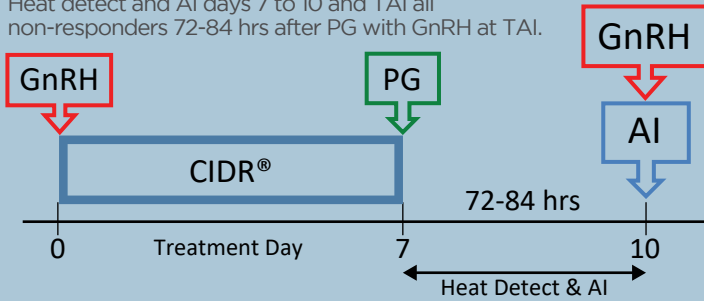

# BEEF HEIFER *Protocols*

## HEAT DETECT & TIME AI (TAI)

For best results perform AI 12 ± 2 hrs after detection of estrus. Use of estrus detection aids (EDA) is highly recommended.

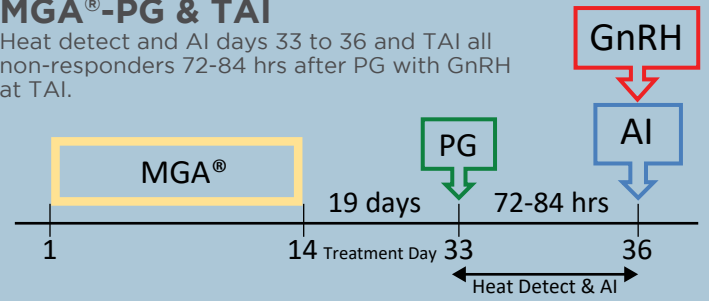

### Select Synch + CIDR® & TAI

Heat detect and AI days 7 to 10 and TAI all non-responders 72-84 hrs after PG with GnRH at TAI.

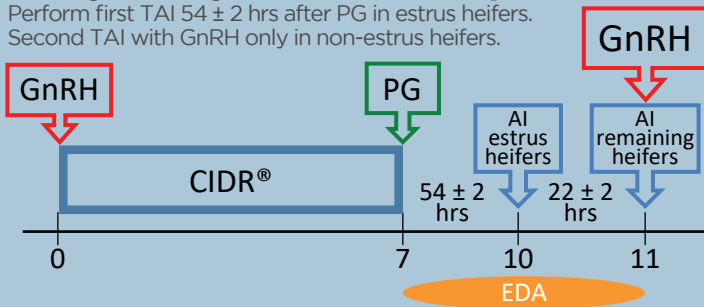

### MGA®-PG & TAI

Heat detect and AI days 33 to 36 and TAI all non-responders 72-84 hrs after PG with GnRH at TAI.

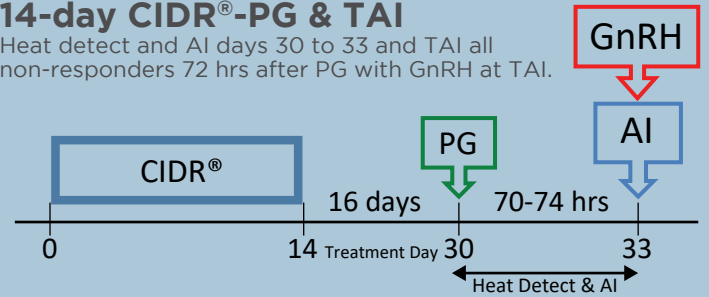

### 7-day CO-Synch+CIDR® & Split-TAI

Perform first TAI 54 ± 2 hrs after PG in estrus heifers. Second TAI with GnRH only in non-estrus heifers.

### 14-day CIDR®-PG & TAI

Heat detect and AI days 30 to 33 and TAI all non-responders 72 hrs after PG with GnRH at TAI.

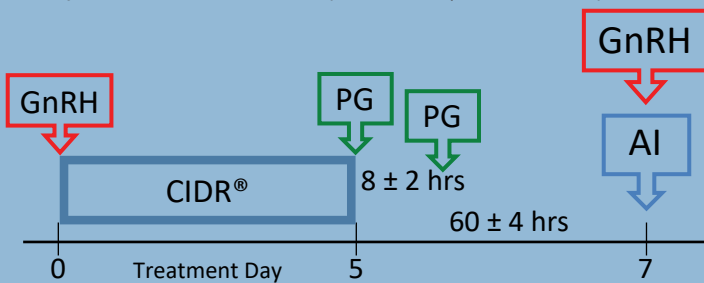

## FIXED-TIME AI (FTAI)

The time listed for Fixed-time AI should be considered as the approximate average time of insemination based on the number of heifers to inseminate, labor, and facilities.

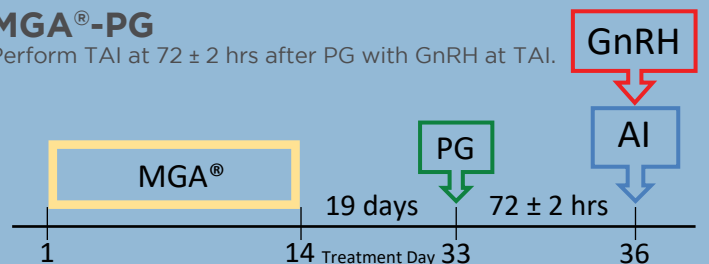

### 5-day CO-Synch + CIDR®

Perform TAI at 60 ± 4 hrs after CIDR removal with GnRH at TAI. Two injections of PG 8 ± 2 hrs apart are required for this protocol.

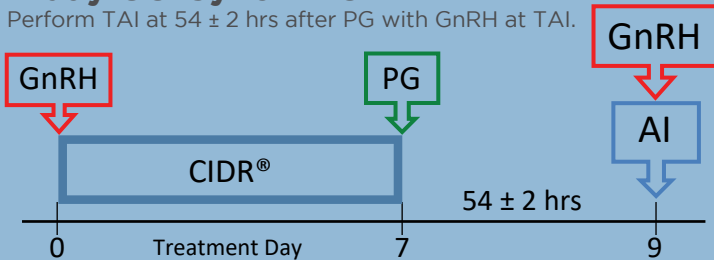

### MGA®-PG

Perform TAI at 72 ± 2 hrs after PG with GnRH at TAI.

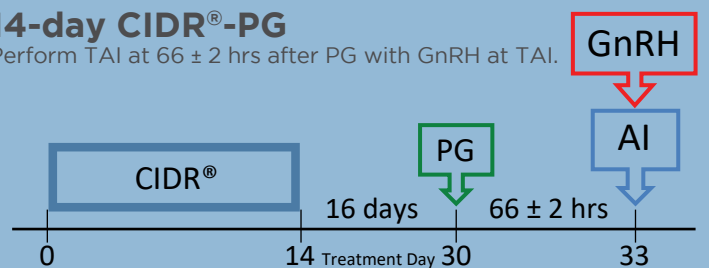

### 7-day CO-Synch + CIDR®

Perform TAI at 54 ± 2 hrs after PG with GnRH at TAI.

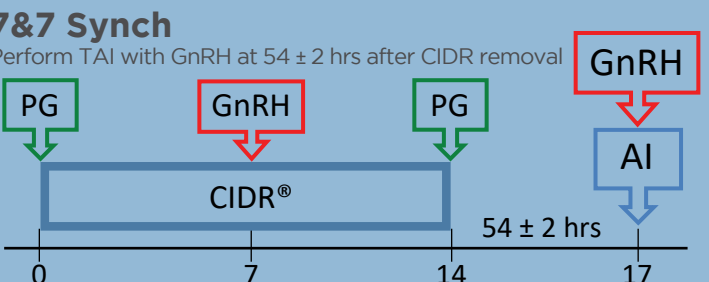

### 14-day CIDR®-PG

Perform TAI at 66 ± 2 hrs after PG with GnRH at TAI.

### 7&7 Synch

Perform TAI with GnRH at 54 ± 2 hrs after CIDR removal

EDA  
Aervoe™, AIPaint™, Detect-her™, Estroject™, Kamar™, Mark-her™, Paintstik™, Quick Shot™, Tell Tail™, Twist-Stik™
