REINFORCED CONCRETE PIPE RANGE

We are proud to offer over 60 types of reinforced concrete pipes. We offer both Flush Joint & Rubber Ring Joint Reinforced Concrete Pipes.

Reinforced concrete pipes also called RCP pipe, are precast and available in a range of diameters. They are used for stormwater drainage and other applications which require a high degree of structural integrity. Manufactured to Australian Standards, our range of precast pipes is suitable for stormwater and sewer applications.

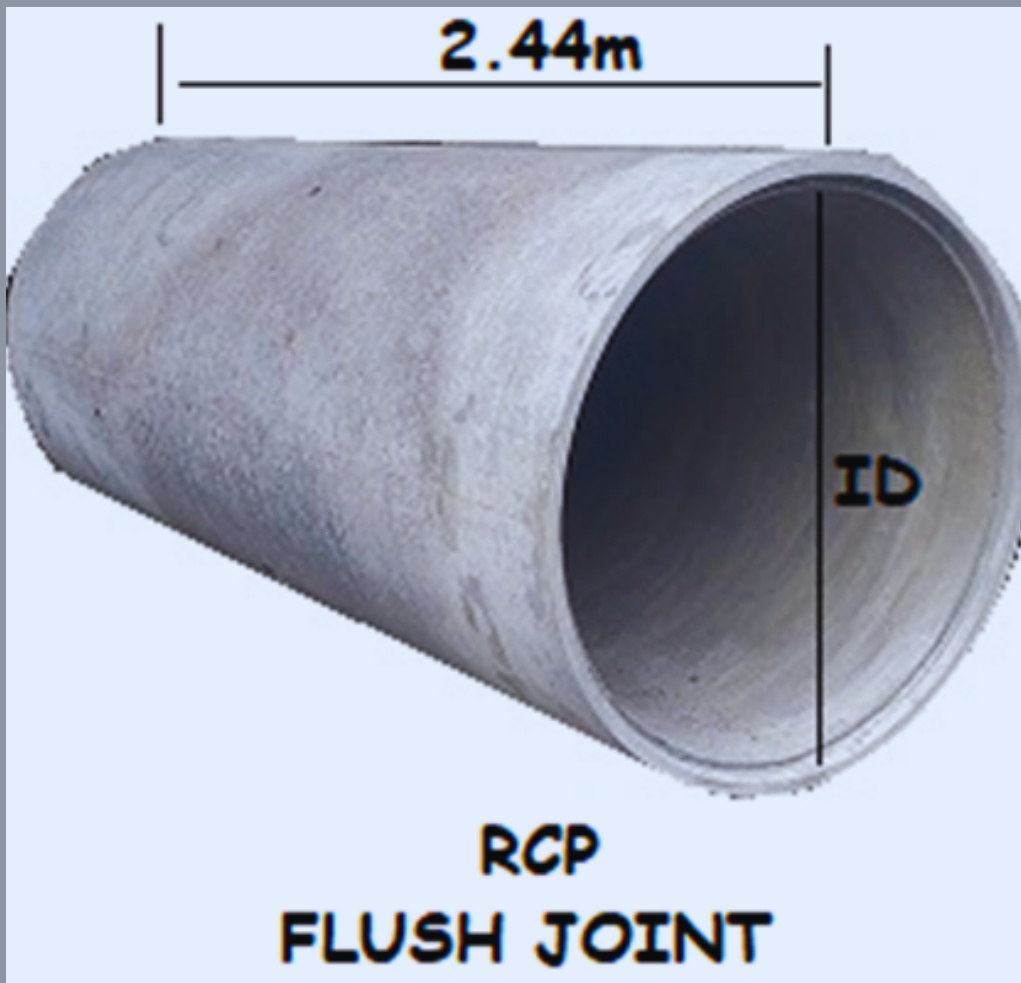

We have a dedicated and experienced team available to assist with your requirements.

REINFORCED CONCRETE BOX CULVERT (RCBC)

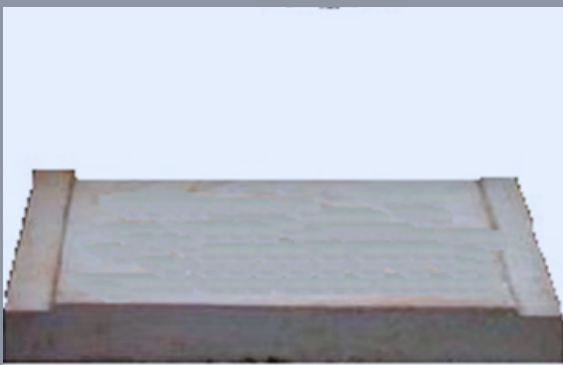

We are proud to offer over 50 types of reinforced box culverts

**BOX CULVERT BASE/
LINK SLAB**

BOX CULVERT CROWN

Box Culverts or U-shaped precast concrete culverts are commonly used in civil engineering and civil construction projects across a variety of applications. They are made from reinforced concrete and are designed to withstand heavy loads and resist corrosion, making them ideal for use in road and bridge construction, as well as in drainage and storage systems.

Box Culverts are also popular for use in underground utility tunnels where they provide a safe and durable housing for electrical cables, telecommunications lines and other services.

Box Culverts offer an ideal solution for drainage culverts where standard concrete pipe products aren't capable of maintaining, leveling and passing a given water flow rate effectively. The availability of base slabs and link slabs is also a useful feature that can assist with installation and provide added structural support.
