I have some guesses.

The two direction arrows may indicate movement or the concept of becoming. The label for the whole diagram is anja, which in Sanskrit means (or can mean) connected consciences. It's possible that the diagram is meant to be a roadmap for achieving connection.

Each pair of symbols seems to connote a progression of some kind. The vertical waves could represent the direction of time and a frequency of some sort. The pairs of symbols are between nodes in the waves. Each pair could be an important step toward anja.

The bottom figure of the filled in square can be taken to mean the real world - the solid world as we experience it. The crescent could represent the start of change or phase - the real, starting to become something; or perhaps a change of state that will open possibilities.

The triangle can mean stability, but usually not in the inverted form. It could mean an interim state that becomes the flower of life. The nodes at the intersections of lines of the star seem more than random here and might be shorthand for the iterative nature of the flower of life, which dates back to ancient Egypt. It's considered a sacred symbol of how life began.

The top pair of diagrams is the most difficult to understand. I like Mr LaPoint's work on string theory. It's possible this means the string-like threads of the universe interact with our galaxy or solar system or planet in such a way as to facilitate the final step towards Om. Om is the sound of the beginning of the universe, when all things were connected; perhaps entangled.

This entire pictogram is not knowable definitively. There are too many symbols with multiple meanings. Egyptian symbols, Sanskrit, and Buddhistic ideas are, or could be present. It's an intriguing mix of stuff.

I don't think the arrows are meant to be DNA. It looks more like direction and frequency related to me. Again, guessing. There's very little to hang onto here.

My guess is that this might have been designed specifically for you and Brent. It's an intriguing puzzle with many possible solutions. The idea that he knew who you were and had knowledge of the Dark Skies world could itself be a clue to what this is.

Just had a thought about that 6 pointed image in the cryptic diagram: if you look at a cube from one corner, it collapses in a hexagon shape. By adding dimensions, you can eventually create seven dimensions, which mathematically would allow something like time travel around the symmetrical portions. It's probably nothing, but just thought you'd appreciate the tidbit.
