SYSTEMS ENGINEERING

Engineering
Design Codes - ET

Operations Data &
Analytics - OT

Information
Systems - IT

Traditional Examples – Past

Three Mile Accident (Nuclear)

- Offline Analysis
- Operator Training Simulators
- Probabilistic Risk Analysis (PRA)

Airline Accident (Airlines)

- Pilot Training
- Equipment Failure RCA
- Man, Machine Interface (MMI) Development

Future

- **Tapping Retired Domain Expertise (at a global level)**
- **Combining Physics/Chemistry with Datasets**
- **Putting Machine Learning to use to capture possibilities**

Applications

- **Sustainability**
- **Energy Transition**
- **Remote Operations**

INDUSTRIAL COMPANIES STRUGGLE WITH DATA AND INSIGHTS TO ACHIEVE ENERGY TRANSITIONS

Enterprise NetZero Planning Solution, Delivers Analytics To Reduce Risks, Increase Decision Confidence, And Accelerate Energy Transition With Ease And Precision.

CURRENT PLANNING APPROACH IS COMPLEX AND INEFFICIENT

- Delayed planning timeline
- Compromised data integrity and ownership
- Sub-optimal collaboration
- Siloed Solution

DSIDER'S NET ZERO PLANNER REDUCES COMPLEXITY AND STREAMLINES PROCESSES

SaaS platform

- Integrates data, process, and analytics
- Creates single source of truth

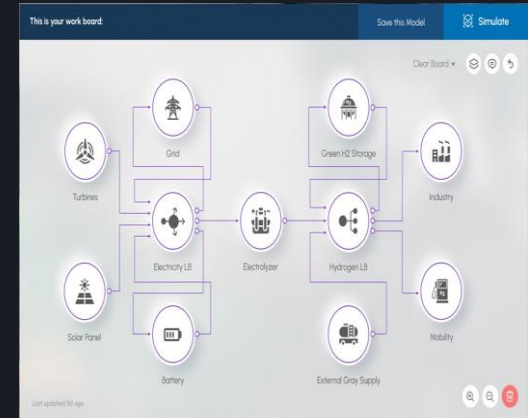

Collaboration

- Better collaboration reduces process timelines
- Advances execution of NetZero plans

Virtual SMEs

- Models embed expertise and create virtual SME
- Eliminates need to build huge departments to do these analysis

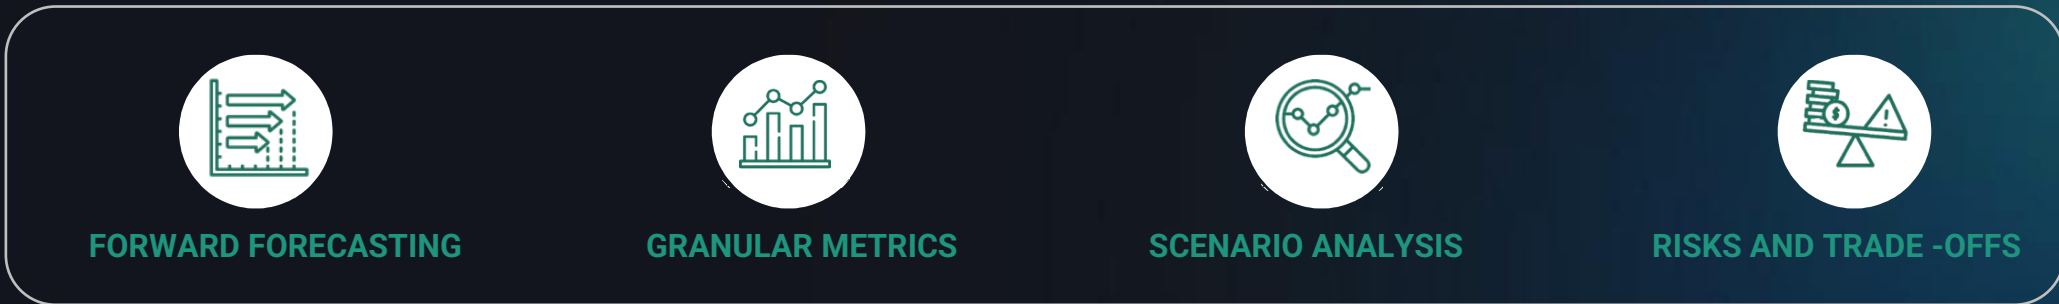

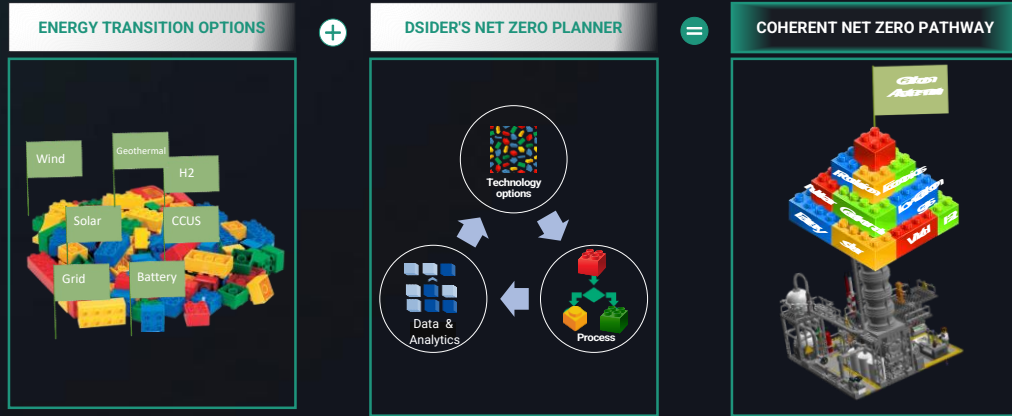

ANALYSIS IN HOURS VS MONTHS

DELIVERING SAVINGS OF \$100M/YR

OUR APPROACH ENABLES DIGITAL "LEGO" STYLE PLANNING

A POWERFUL INTEGRATED PLANNING PLATFORM

OPTIMIZED PLAN

Creating Tomorrow by Building Today With Digital Twins

You can't dig a new hole by digging the same one deeper

Creating Tomorrow by Building Today With Digital Twins

Entering The Unknown and Everything Is Changing

- **The global digital twin market size was valued at around \$8.6 billion**, and it is projected to grow up to US \$137 billion by 2030.
- A.I. is now a downloadable consumer product and current to new generations and global to local organizations are taking note: new degrees are emerging
- Internet bandwidth speed and load has increased. *Last month China unveiled the 'world's fastest internet' network, claiming data transmission at 1.2 terabits per second*
- Digital Graphics and cloud-based virtual representations are able to mimic real world scenarios and physics in parallel with speed of reality

Creating Tomorrow by Building Today With Digital Twins

The Emerging Adventure: Bridging the gap between thinking and reality

- Organizations have proven to increase productivity at unparalleled speeds that have inspired new revenue streams, efficiencies, and innovations.
- Scenario Panning has become more acute and able to risk mitigate threats and prove-out opportunities relative to impact upon the organization.
- Along with new potential: new jobs and capabilities are emerging at unprecedented rates to integrate edge computing capabilities and enable real-time analytics that deliver better decision-making potential at the edge of networks.
- Increased rapid implementation of competitive edge tools and resources for reliable first mover advantages and response to the marketplace

Creating Tomorrow by Building Today With Digital Twins

The Emerging Challenges: The unknown

- Technology is emerging and will cause adjustments to enterprise siloes of legacy systems
- We don't know what problems the solutions will cause, what types of jobs will occur, how operations will accommodate a parallel workforce... or operational layers between digital and real.
- Training, trusting proven providers, and prudent rollouts are critical to success
- The industry workforce is unprepared and lack the skills to adjust and capitalize:
 - 28% to 36% gap of innovation skills in the global workforce: Critical Thinking, Lateral Thinking, Systems Thinking, Logic Modeling, and Communications/Leadership. Meanwhile, 28% of the workforce will retire in the next 5 years.

Creating Tomorrow by Building Today With Digital Twins

The Emerging Approach: Be Prudent and Learn

- Don't boil the ocean
- New academics, certifications, and simulation training are being created from digital to skills of innovation
- Digital Twinning technology providers must be trusted partners... not vendors.
 - *There are emerging providers with experience that have proven to be trusted and skilled*
- Educate your organization and monitor evolution with a sense of expectation and engagement. If you're going to not adopt, don't be left too far behind. Draft behind leaders (or competition) and learn.

The world has changed. You're either going to be part of it... or subject to it.
