

I propose to help implement a long-term technology improvement and maintenance plan for this company. This effort would help keep the company's network up-to-date with current technology, prevent unnecessary down-time, help protect the network from adverse weather events, and prepare the network for future company growth. This plan would include the following features to achieve those goals.

### **Duties to be performed by Saint Gabriel Network Solutions:**

- Installation and management of all access points and security cameras
- Complete network management including all network infrastructure
- All wiring and associated tasks
- All troubleshooting and associated duties
- On call availability / in person presence
- Possible desktop support, (hardware and software issues, etc)

### **Not included in monthly fee:**

- Costs of cable or other appurtenances
- Costs of replacement equipment

### **Monthly fee =**

- Paid via check or automatic deposit
- Contract can be adjusted at any time if anything changes
