

What Massage Can Do For You

Beyond Pain Relief, Massage is Valuable for Preventive Care

Karrie Osborn

This article first appeared in the Summer 2013 issue of Body Sense.

Whether it is an aching back, recovery from an injury, a case of carpal tunnel syndrome, or a host of other debilitating physiological conditions, there's no doubt massage and bodywork works to relieve pain. But once your therapist has helped you tackle your pain, do you quit calling? When the pain is gone, are you gone, too?

Massage therapy is highly effective for pain relief, but it is an amazing preventive therapy as well. Massage helps build and maintain a healthy body (and mind), it combats stress, and it works to

Massage can play an important role in a good health-care regimen. Just as you eat healthily, exercise regularly, and take your vitamins to ward off illness and maintain a fit body, you should consider making frequent massage a part of your wellness lifestyle.

According to Benny Vaughn, a sports massage expert in Fort Worth, Texas, one of the benefits of consistent and regular massage therapy is better flexibility. "This happens because regular and structured touch stimulus enhances the nervous system's sensory and spatial processing capacity," he says. "That is, the person becomes more aware of her body's movement in space and becomes more aware of tightness or

Massage helps you maintain a healthy body.

keep the immune system strong. In short, massage can keep on working for you, even after the pain is gone.

MASSAGE FOR WELLNESS

If it's been a while since you booked your last massage--because your pain is no longer an issue or your injury is fully rehabbed--you might want to consider massage for preventive care.

pain long before it reaches a critical point of mechanical dysfunction."

As a preventive measure, frequent massage puts you more in tune with your body. "The consistency of massage therapy over time creates a cumulative stress-reduction effect," Vaughn says.

"The person becomes acutely aware of stress within her body long before it can create stress-driven damage."

And the more massage you receive, the more benefits you reap. "Massage therapists know that people who get massage regularly demonstrate greater improvement and notice a reduction in pain and muscular tension, as well as an improvement in posture," says Anne Williams, author of *Massage Mastery: From Student to Professional* (Lippincott Williams Wilkins, 2012).

"People regularly make a commitment to fitness," Williams says. "People regularly make a commitment to changing their diet. The difference they'd experience if they regularly made a commitment to massage is mind-blowing."

STRESS IS A KILLER

Stress is more than just a word we throw around to describe the nature of our hectic day. Today, we understand that stress kills.

According to the Benson-Henry Institute for Mind Body Medicine, 60-90 percent of all US medical visits are for stress-related disorders. Chronic pain, headaches, heart disease, hypertension, and ulcers can all be wrought from stress. Many would argue that the best benefit of massage is its ability to reduce the stress in our lives.

From the perspective of daily living, think about the stress you felt at today's meeting--now it's hiding in your neck. Tomorrow that can turn into stiffness and eventually begin to affect other parts of your body. If you see your massage therapist for your regular session this week, the chances are good you won't reach the tipping point. Think of massage and bodywork as a way to rebalance your body.

Noted researcher Tiffany Field and her colleagues from the Touch Research Institute at the University of Miami School of Medicine report that massage causes positive biological changes when it comes to stress. Through the course of more than 20 studies, these scientists found that massage decreases cortisol (a stress-derived hormone that negatively affects immune function and kills our immune cells) and increases dopamine

and serotonin (the neurotransmitters most associated with emotional well-being).

Add to this the research that shows massage can lower your heart rate and decrease your blood pressure, and you have a mighty effective, nonpharmacological, stress-fighting tool that's about as natural as natural can get.

A ONE-HOUR VACATION AND SO MUCH MORE

You may no longer need to rehab that knee or work the scar tissue from your surgery, but don't forget about everything else massage can do for you. Massage is the entire package, helping to heal body, mind, and spirit. Think of it as a one-hour vacation with amazing return on investment.

Whether it be maintaining joint

flexibility, managing blood pressure, or enhancing immunity, massage works. From repair to relief and from recovery to relaxation, massage is a magnificent piece of natural medicine you should always have as part of your health-care routine.

Regular massage helps reduce stress and improve your quality of life.

Lavender

An Essential Oil for Fundamental Health

Laurie Chance Smith

Lavender essential oil is a one-stop medicine chest, helping to reduce anxiety, fatigue, and stress and balance hormones, increase the immune response, lower blood pressure, and relieve pain. To utilize lavender's healing benefits at home, mix five to 10 drops of lavender essential oil in one ounce of jojoba oil or unscented lotion. (Essential oils shouldn't be applied directly to the skin; it's best to partner them with a carrier oil, liquid, or lotion.)

EARACHES

For earaches, dab one drop of lavender massage oil behind the ear and rub gently. Alternatively, place one drop of lavender oil on a cotton ball and carefully place inside the outer ear.

HEADACHES

Inhaling lavender is also effective for headache relief. Add a few drops to a bowl of warm water and breathe. Gently rub lavender massage lotion on the temples, forehead, and base of the neck.

COLDS

Lavender oil can also help break up coughs and clear sinuses. Colorado-based holistic aromatherapist Nicola McGill suggests the regular home-use of antiseptic essential oils such as lavender to help avoid colds and other infectious diseases. Add a few drops to a vaporizer to help clear colds and infuse the home with lavender's scent.

STRESS

At night, six to eight drops of lavender added to a warm bath helps melt away stress and relieve fatigue. Blend a footbath by adding three drops of lavender to a bowl of warm water, sink your feet in, and relax. For help inducing sleep, add two or three drops of lavender essential oil to the underside corner of your pillow.

TRANQUIL AROMA

A human takes 23,040 breaths a day, and each inhale floods the system with scent. Rely on lavender's tranquil aroma

to clear the way toward peaceful days.

Lavender is loaded with wellness properties.

Massage for Old Injuries

Ancient Injuries Don't Have to Make You Feel Old

Art Riggs

Injuries such as chronic back pain, trick knees, and sticky shoulders are not necessarily something you just have to live with. Massage techniques might hold the key to unlocking this old pain.

Will Massage Help?

The benefits of massage will depend on the extent of the injury, how long ago it occurred, and on the skill of the therapist. Chronic and old injuries often require deeper and more precise treatments with less emphasis on general relaxation and working on the whole body. Massage works best for soft tissue injuries to muscles and tendons and is most effective in releasing adhesions and lengthening muscles that have shortened due to compensatory reactions to the injury. Tight and fibrous muscles not only hurt at the muscle or its tendon, but can also interfere with proper joint

movement and cause pain far away from the original injury.

Therapists who perform such work often have specialized names for their work--such as orthopedic massage, neuromuscular therapy, myofascial release, medical massage, etc.--but many massage therapists utilize an eclectic approach combining the best of the specialties.

It Works!

A recent Consumer Reports article ran the results of a survey of thousands of its readers and reported that massage was equal to chiropractic care in many areas, including back and neck pain. Massage also ranked significantly higher than some other forms of treatment, such as physical therapy or drugs.

If that nagging injury persists, consider booking a massage. Be sure to discuss the injury with your practitioner: How did you receive the injury? Have you reinjured it? And what exactly are your symptoms? Often, the body compensates in one area to protect another that has been traumatized, and this can create new problems.

Discuss the issues with your massage therapist. (Sometimes just talking about old injuries can play a significant role in the healing process.) Together, the two of you can work to determine a treatment plan.
