

DROUGHTS DON'T HAVE TO DIMINISH OUR LIVES OR ANNUAL CROPS! WE HAVE THE SOLUTION

Droughts in Europe, Africa and even parts of the US are having terrible effects on rural populations, farmers, animals, and the food production business.

A perfect example is the Olive Oil crop in Spain.

Please consider this one article in a newspaper in Belgium. This headline speaks for itself:

Olive oil production threatened due to extreme drought in Spain and Italy

We calculate this loss of olive oil to be in the \$10,000,000's of dollars or even worse, and these droughts are only going to get worse.

Here is the link to the Brussels newspaper that talked about why olive oil may be more expensive and scarce in Brussels quoting experts in Spain who predict a 25-30% decrease in olive oil production if the drought doesn't get some relief.

<https://www.brusselstimes.com/266646/olive-oil-production-threatened-due-to-extreme-drought-in-spain-and-italy>

Climate change experts and weathermen worldwide are predicting that the drought and heatwaves are only going to get hotter, and the droughts even more deadly.

Europe News states that "Severe droughts 'could be the norm' in the EU by 2050.

SOLUTIONS:

The H2O/Skywater Model 360 is the world's best Atmospheric Water Generator and during periods of drought and high temperatures that often accompany droughts, the 360 will constantly generate 1000+ liters of water per day.

In 2018, the H2O/Skywater Atmospheric Water Generator (AWG) won the X Prize for the Best in the World beating 90+ competitors. Skywater won the X Prize with a cost of \$.02-.10 per liter, depending on what source of energy is used.

Here is the Youtube link of the X Prize Award Ceremony.

<https://www.youtube.com/watch?v=E7p0vijKXn8>

Waterfarms are now being set up in Japan, Africa, Europe and South America.

H2O also has a **BIG WATER SYSTEM**, the AWT System which now is cleaning up fracking water in Texas and other water sources from which AWT/H2O can generate 500,000 gallons of water per day using deep earth geospatial software and tapping into very deep aquifers or other sources of existing water.

Water, and potable and agricultural water, is becoming the NEW OIL.

H2O/Skywater is very excited about the prospect of being able to offer the World's Best Atmospheric Water Generator and the AWT BIG WATER SYSTEM for agricultural and human purposes worldwide.

We would hope that you see the urgency of the drought situation in Spain and we would love to work with you to greatly reduce or even eliminate the drought equation in your next year's planning process.

We're ready and excited about working with you and your industry in Spain.
