NICHE FENESTRATION SOLUTIONS

WHERE DESIGN INTENT MEETS PRECISE EXECUTION

Welcome To RBS

R. B. Sukhramani LLP (RBS) is a boutique façade and fenestration company specialising in premium window systems and design-driven façade solutions. We collaborate closely with architects, consultants, and developers to deliver technically complex building envelopes that demand precision, performance, and a deep respect for architectural intent. Our work is centred on carefully selected, high-quality residential, hospitality, and commercial projects where execution is as critical as design vision.

At RBS, we view façades and windows not as commodities, but as essential architectural elements that shape experience, comfort, and perception. Our philosophy is rooted in early coordination, technical clarity, and disciplined execution — ensuring buildability without compromising design integrity. We believe true quality is defined by restraint, precision, and consistency.

What We Do?

Entrance Solution

The entrance defines the identity of any building. Our entrance façade solutions are designed to create a powerful first impression while maintaining structural integrity and long-term performance. Each design is customized to align with the client's brand personality and architectural vision, ensuring the building speaks before words are spoken.

1

Premium Window Solutions

Our premium window solutions combine aesthetics, energy efficiency, and advanced engineering performance. Designed for modern commercial and high-end residential projects, these systems maximize natural light while ensuring thermal insulation, acoustic comfort, and weather resistance. We integrate Schüco systems, bringing German engineering and technology together with Indian installation excellence and precision. The result is high-performance aluminum windows that deliver durability, smooth operation, and long-term reliability as true performance elements of the building envelope.

2

Conventional Façade Solutions

Standardised façade elements such as structural glazing, metal cladding, and louvre systems, delivered through disciplined detailing, controlled fabrication, and consistent site execution.

3

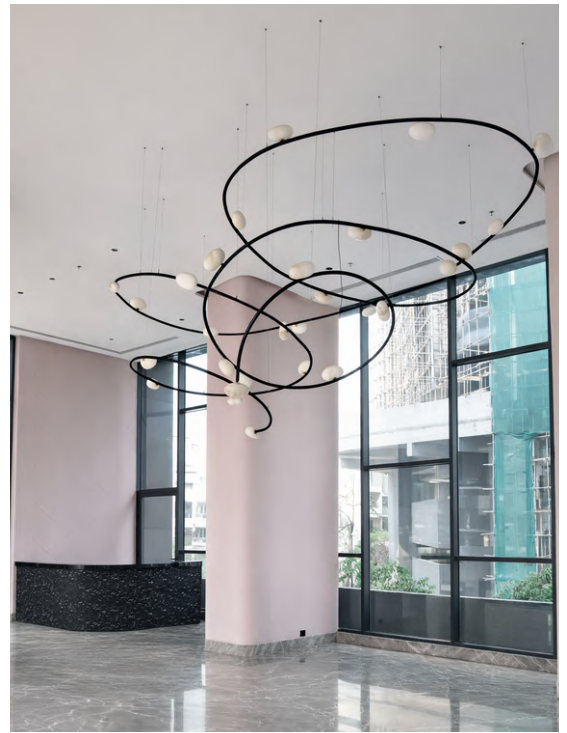

Signature Façade Solutions

Our signature façade solutions are crafted for projects that demand distinction and strong architectural presence. These custom engineered systems transform buildings into landmarks through innovative design, premium material combinations, precision fabricated panels, and integrated lighting features. We work closely with architects and developers to convert bold concepts into structurally sound, fabrication-ready solutions that enhance both protection and identity.
