

We're Hiring: Full Stack Developer @ Budhhi

Location: Remote (Canada Preferred) | **Type:** Part-Time / Flexible | **Compensation:** Will be paid after initial funding needs are met

Who We Are

Budhhi isn't just a tech company.

We're an **AI-powered imagination lab**.

We invent, develop, and bring to life **mind-bending AI applications** that push the boundaries of how people connect, collaborate, and learn. Budhhi is inventing and developing the future of intelligent digital platforms

Our mission?

To make the future feel like magic... and build it today.

About the Role

A **Full Stack Developer** who can speak frontend and backend fluently—someone who codes like a poet, debugs like a detective, and delivers like a founder. If you enjoy building elegant user experiences *and* robust APIs, you're our kind of human.

What You'll Do

- Architect and develop scalable web applications across the stack (React, Node.js, etc.)
- Build beautiful, accessible, and intuitive UIs with performance in mind
- Design and maintain RESTful APIs or GraphQL endpoints
- Collaborate with UX designers, AI engineers, and product leads to ship smart, human-centered features
- Work with cloud platforms (AWS, Azure, Vercel, Firebase, or similar)
- Write clean, testable, and maintainable code (because future-you deserves kindness)
- Contribute to our DevOps, CI/CD, and release processes

- Participate in code reviews, system design discussions, and team brainstorming

You Bring

- Solid grasp of web architectures, database design, and API integration
- Comfort working with visual development platforms and custom code where needed
- Experience with tools like **Auth0, Stripe, Webhooks, GPT APIs, Firebase**, etc.
- A creative mindset with strong problem-solving skills
- Bonus: familiarity with security best practices, RBAC, and audit trail implementations

Our Stack Includes:

- **Frontend:** JavaScript, TypeScript, React.js, Next.js, HTML5, TailwindCSS
- **Backend:** Java, Node.js, Express.js, Python (for automation and APIs)
- **Databases:** PostgreSQL, MySQL, Firebase, MongoDB
- **Authentication & Security:** Auth0, OAuth 2.0, JWT, Audit Trails
- **Cloud & DevOps:** AWS, Docker, CI/CD Pipelines
- **APIs & Integrations:** REST, GraphQL, Stripe, Webhooks, Third-party APIs
- **Emerging Tech:** Blockchain APIs, OpenAI Integrations, Serverless Architectures

To Apply:

1. Send your **portfolio or past projects**
2. Your resume (or GitHub, LinkedIn, or Notion profile)
3. One feature idea you'd love to build
