Hiring: QA Tester / Quality Assurance Engineer @ Budhhi

Location: Remote (Canada Preferred) | **Type:** Part-Time / Flexible | **Compensation:** Will be paid after initial funding needs are met

About Budhhi

Budhhi is where big ideas meet bold execution.
We invent, build, and scale innovative AI-powered applications — and we know that brilliant products start with flawless quality.
If you love breaking things (on purpose) and making sure users get magic, not bugs — you'll love it here.

What You'll Do

- Design and execute manual and automated test plans
- Hunt bugs across web and mobile apps — and celebrate each one found
- Validate APIs, user flows, and security features like MFA and SSO
- Keep things smooth across browsers, devices, and platforms
- Work with devs and designers to turn "found it!" into "fixed it!" fast

What You Bring

- 2–5 years of QA testing experience
- Strong manual testing chops + some automation magic (Selenium, Cypress)
- API testing skills (Postman, Swagger)
- SQL basics for backend validations
- Clear communication and a detective's mindset
- Bonus points for cloud testing or security testing skills
- Selenium, Cypress, Postman, BrowserStack, JIRA, GitHub

To Apply:

- Your resume
- A few lines about the best bug you ever found (optional, but we'll love it)

At Budhhi, great QA isn't an afterthought — it's the superpower behind every launch.
Ready to test smarter, faster, and with a little more fun? Let's go.
