Lake Maintenance Service Report

ACCOUNT: Viewpoint Lake, Sun City Recreation
10626 West Thunderbird Blvd, Sun City, AZ 85351
TO: Sam Oatman
FROM: Janet Scheffman / 950158
DATE: Week of 21 September 2026
FAX #: (623) 876-8341

The water levels remain at the same level as last week.

The Cameo and the Rec Center and Bayside fountains are all running this week. The 103rd AV fountain was not operational. The waterfall pump is running so there is water movement over the streams.

The three weekly vectobac treatments are done in the first three weeks of the month and any filamentous algae is treated in the 4th week of the month in the lagoon area. The algaecide keeps the filamentous algae growth in check, and the vectobac treatments are done year-round to control midges in the lagoon area.

The 4 street grates are treated the first week of the month with dry vectobac dunks to control midges in the case of standing water in the grates.

No midges have been seen in the main lake in months following the spring vectobac treatments and the addition of more goldfish and blue gill.

Average surface temp: 86.4 F

Average bottom temp: 85.9 F

Salinity: 0.2 ppt

Dissolved oxygen: 5.22 mg/L (surface) / 4.71 (bottom)

Secchi: 5 feet 00 inches

pH: 8.2

Current water levels: +4.00

The color and clarity have remained high even in the hottest summer months and no surface planktonic algae growth or bottom algae issues.

Viewpoint Lake service report

Page 2/2

No dust storms over the past week but some rainfall later in the week.

We are close to October and the water temperatures will start to slowly drop off over the next several weeks.

I am checking carefully for any rooted aquatic weeds or weed fragments with the recent weed issues in Dawn Lake. No aquatic weeds have been seen and if there are any fragments that reach the lake there is a high concentration of grass carp stocked to eat aquatic weed growth.

Periodic algaecide treatments are done in the warmest months on the boat ramp as a safety precaution and I will continue as needed until we get into the cooler weather.

No waterfowl mortality or any indications of botulism seen.

Removed one dead adult blue gill.

Warning: None

Pesticides can be hazardous. Please keep children and pets away until applications are dry, dissipated, or aerated. For additional information contact Hurricane Aquatics (license # 5746) at (602) 619-8492.
