Lake Maintenance Service Report

ACCOUNT: Viewpoint Lake, Sun City Recreation
10626 West Thunderbird Blvd, Sun City, AZ 85351
TO: Brian Duthu / Mary Doyle
FROM: Janet Scheffman / 950158
DATE: Week of 09 September 2024
FAX #: (623) 876-8341

The water levels remain at normal full levels after the lake was refilled in November (2023) and levels are up from last week.

All four of the fountains are operational as of April; 103rd Av, Bayside, Cameo Bridge and the Rec Center. Cameo Bridge fountain is running but the nozzle is partially clogged.

Average surface temp: 87.7 F
Average bottom temp: 87.2 F
Salinity: 0.2 ppt
Dissolved oxygen: 5.35 mg/L (surface) / 5.10 (bottom)
Secchi: 5 feet 10 inches
pH: 8.2
Current water levels: +3.0

There was no monsoon activity over the past week and the water chemistry is largely unchanged from last week. We are still a few weeks away from the water temperature starting to drop.

The color and clarity are great after the dye application last month; the clarity is 2 inches higher than last week and there was less planktonic algae in the water column.

There was still some bottom algae floating to the surface this week and most was near the boat ramp and the north end of the lake but there was less than last week and no treatments needed.

The average lake clarity remains high, especially for the warmer months and the dye coloration should last into early October.

Viewpoint Lake service report

Page 2/2

There was the usual trash, debris and palm husks in the lake, mostly along the north side of the lake (cameo drive) and some in the bayside cove.

The mats of filamentous algae that were treated earlier in the summer have died back and not returned

The waterfall is running normally.

Periodic treatments (usually 1-2 times a month) with algaecide are done in the warmer months on the boat ramp are done as a safety precaution. The ramp treatments will continue for a couple more months until we get some fall cooling.

No waterfowl mortality seen.

A resident pointed a dead fish that was up near the street (cameo drive) and I removed it. It was grass carp likely caught by a heron or other predator fish.

I will keep everyone updated on the estimated date of the next fish delivery when the date is closer.

Warning: None

Pesticides can be hazardous. Please keep children and pets away until applications are dry, dissipated, or aerated. For additional information contact Hurricane Aquatics (license # 5746) at (602) 619-8492.
