Lake Maintenance Service Report

ACCOUNT: Viewpoint Lake, Sun City Recreation
10626 West Thunderbird Blvd, Sun City, AZ 85351
TO: Eddy Renio / Terry Klatt
FROM: Janet Scheffman / 950158
DATE: Week of 25 August 2025
FAX #: (623) 876-8341

The water levels remain at normal full levels after the lake was refilled in November (2023).

103rd Av, Cameo and the Rec Center and Bayside fountains are all running this week. The waterfall pump is running so there is water movement over the streams.

I did not see any midges in the lagoon or the lake again this week. I added some vectobac larvicide to the lagoon again this week to reduce or knock back any midge fly larvae that may be in that area. The 4 street grates adjacent to the lake are also treated with dry vectobac larvicide every month.

There was not much rainfall but enough that there may be some puddles and some midges could hatch out over the week but none seen so far.

The coloration from the dye application earlier in the month remains ideal with a dark blue/black tint to the water and no floating mats of bottom algae after the treatment. The dye will gradually fade over time but with cooler weather coming we will likely not need another treatment this year.

Average surface temp: 86.0

Average bottom temp: 85.4 F

Salinity: 0.2 ppt

Dissolved oxygen: 5.15 mg/L (surface) / 4.78 (bottom)

Secchi: 4 feet 08 inches

pH: 8.2

Current water levels: +4.00

There was finally some monsoon activity over the course of the week but mostly wind and blowing dust than actual rainfall.

Viewpoint Lake service report

Page 2/2

Water levels were higher this week but from fill water, not enough rain to make any appreciable difference in the water levels.

The winds and blowing dust blew in more debris, general trash and some palm husks.

No appreciable issues with filamentous algae in the main body of the lake and the amount of planktonic algae in the water column was also reduced the dye application.

Periodic treatments are now done twice a month with algaecide on the boat ramp during the summer months.

No waterfowl mortality seen. One dead fish, a catfish

Warning: None

Pesticides can be hazardous. Please keep children and pets away until applications are dry, dissipated, or aerated. For additional information contact Hurricane Aquatics (license # 5746) at (602) 619-8492.
