

## Suggestion on how save money in your homes.

### How to save money in the laundry room:

1. Washing your clothes with 1OZ of liquid detergent in cold water saves you money.
2. If you set your laundry machine to “high spin” it helps cut down on drying time, which will save money as well.
3. If you remove your heavier clothes (Jeans, jackets, towels) from your lighter clothing in the dryer it helps.
4. Use the dryer cool down cycle, if it has one, and make sure your unit is well balanced.

### Tips to save in the bathroom:

1. Use water savor toilets, High Pines Village uses those.
2. Fix leaks right away.
3. Use aerated faucets and shower heads!

### How to save on heating and cooling:

1. The use of fans can lower a room’s temperature up to 7 Degrees during the cooling season.
2. It is best to clean your filter on your cooling and heating system at least once a month for less restrictive airflow on your unit.
3. You can set the AC a few degrees higher than your comfort zone and it will keep your room cooler and more comfortable for a longer period when the ac is turned off.
4. You can lower your thermostat on your water heater to 120 Degrees Fahrenheit, the factory pre-sets it to 140 Degrees.
5. Finally, you can turn your water heater on from 5AM to 5Pm and have more than enough hot water to last the entire day!
