

Product Details - Powder Coated Wood Table Tops

Powder Coated wood tables are made with a 1 1/8" high density fiberboard for indoor use and 1" thick treated high-density fiberboard for outdoor use. An epoxy base powder is used for indoor and a polyester based powder is used for outdoor to eliminate fading or warping outdoors. With a special low temperature curing powder coat material, the powder is applied to the fiberboard and baked into the pores of the wood, making for a bond that results in a very durable table finish.

Quick Facts:

- **Seamless** - eliminates contamination, warped seams, delamination
- **Heat Tolerant** - no damage from hot dishes
- **Durable** - Powder Coating reduces warping, cracking and splitting
- **Low Maintenance** - Stains, spills and moisture easily wipe off, even after prolonged exposure. Easy to clean with Dawn or any mild dish soap and water
- **Cost Effective** - Economical pricing

Standard Lead Time - 3 - 4 Weeks, Expedited Lead Time Available
