

# Perfect Tables

## Table Tops and Bases Assembly Information

**Table Tops or Base Only Order** – if your order only contains table tops or bases, hardware will not be included. Why? The thickness of the table tops, and the thickness and placement of the connection point of the bases has to work together to ensure the table is going to be as sturdy and safe as designed.

A general guide is:

Align the Table Base Top Plate to the Center of the Table.

Attach the screws to the outer four corners of the table base, at a minimum.

Ensure the screw length is at least **1/4” inch away from the top of the table**, once the total thickness of the top and Table Base Top Plate is accounted for,

For example:

If the table top is **1 1/2”** thick, and the plate on the base is **1/8”** thick – account for the screw to accommodate a maximum length of **1 1/8”** so your screws, leaving **1/4”** – in this case a #8 Wood screw would be appropriate

Screws can be purchased at any hardware store and should be drilled into the table.

\*Do not use any hole marks found on the bottom of the table – the top should be placed on the floor and the base centered. The holes on the base, centered on the bottom of the table are where to put the screws.

**Table Tops and Base Order** – Good news, if you ordered table tops and bases together from Perfect Tables, you will receive a hardware kit and instructions for your order. Please note that this will be shipped to you separately from the freight shipment of your items.
