

How to Deter Elk & Other Critters

Repellex

Repellex stops Elk, deer, raccoons, skunks and rabbits from browsing. Spray directly on dry plant material. Typically effective for 10-12 weeks. Can be used on trees, shrubs, ornamental plants and flowers. Follow label directions.

Liquid Fence

Liquid fence works on scent. So deer, elk and other foliage eaters don't have to eat to be repelled. Spray on all non-edible trees, shrubs, flowers and vines. Harmless to plants and animals.

Mountain Lion Urine

Mountain lion urine is effective for repelling bears, elk, deer, javelina and coyotes. A plastic dispenser hung on or in trees and gardens will deceive unwanted animals into thinking a predator is near. Glen's dog found the smell of this VERY interesting! And yes, it is harmless to pets.

Repels-All

Repels-All is an outstanding repellent. It is specifically for deer, elk, rabbits and other four legged foliage eaters. The odor irritates the nostrils, making the animal seek food elsewhere.

Elk and Deer fencing

Elk & deer fencing can be used to create an animal resistant barrier around the whole yard, garden or around each tree, shrub or bush. This fence is 7 1/2 feet tall and can be cut to length for your specific needs. This is what we use on the sides and back of our property at Plant Fair Nursery and it has worked perfectly!

To stop deer & elk, try Glen's cool tip:

Look and see where the pesky critter enters your yard. If you are using *Lion Urine*, hang the dispenser bottles along that path. Be sure to hang them at nose-level of the critter you want to stop.

When using any of the sprays, spray them on the plants at nose level of the critter you are trying to stop. Spraying it on the ground does not work!
