Clinical Supervision

Duration: 1 day

CPD Hours: 7.5

Date: TBC

Format: Face-to-Face or Online

Fee: TBC

Overview:

Clinical Practice is becoming increasingly more demanding across health and social care environments. The nature of this work can be stressful, complex, and often involves working with associated risk issues.

Those who work in health and social care, as part of their roles are required to utilise clinical supervision. health and social care workers often receive minimal clinical supervision training. Indeed, many workers receive no clinical supervision training at all and yet are expected to carry this out.

This one-day course offers a contemporary overview of clinical supervision. This may be a refresher for some, and for others, a helpful introduction to clinical supervision.

Who will Benefit

This course is relevant for all health and social care staff (professionally qualified and unqualified support care staff). The course will enable workers to recognise the importance of the clinical supervision process to support their practice, lifelong learning/development, and their own well-being.
