

**Specialists in Geotechnical
Ground Investigation**

About Us

Mercia Drilling Limited is a UK-based geotechnical ground investigation contractor delivering reliable, high-quality site investigation services for construction, infrastructure, utilities, and environmental projects. We combine modern, low-impact drilling technology with experienced operatives to provide accurate ground data safely, efficiently, and responsibly.

Our focus is on providing clients with the information they need to design with confidence, manage risk, and comply with current British Standards and industry best practice.

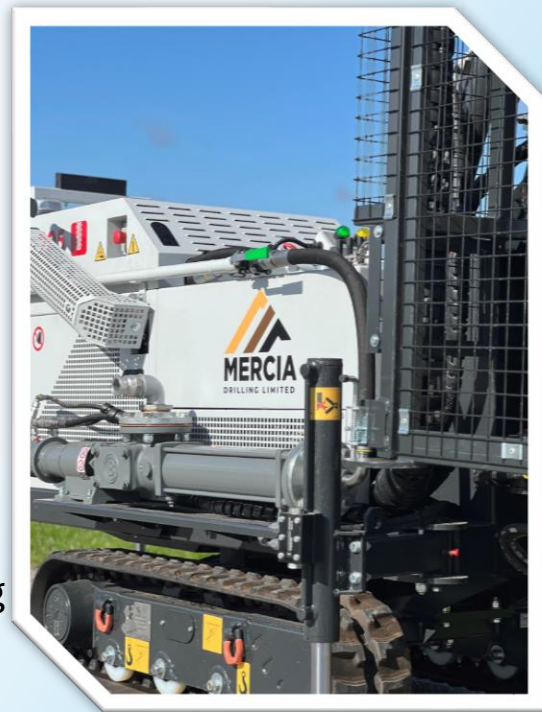

Our Geotechnical Ground Investigation Services

Rotary Drilling (Open Hole & Cored)

Mercia Drilling Limited provides rotary drilling for deeper investigations and more challenging ground conditions.

Rotary drilling is suitable for:

- Rock coring and bedrock investigations
- Deep foundation design
- Geothermal and specialist ground investigations
- Both open-hole and continuous core drilling techniques are available, depending on project requirements.

Window Sampling

Window sampling is a rapid and cost-effective ground investigation technique ideal for shallow investigations.

Key benefits:

- Minimal disturbance to the site
- Fast mobilisation and completion
- Suitable for restricted access locations

Window sampling is commonly used for:

- Preliminary site investigations
- Environmental and contamination assessments
- Shallow geotechnical profiling

In-Situ Testing

To support accurate geotechnical design, we undertake a range of in-situ tests during drilling operations, including:

- Standard Penetration Tests (SPT)
- Dynamic Probing

These tests provide valuable information on soil strength, density, and bearing

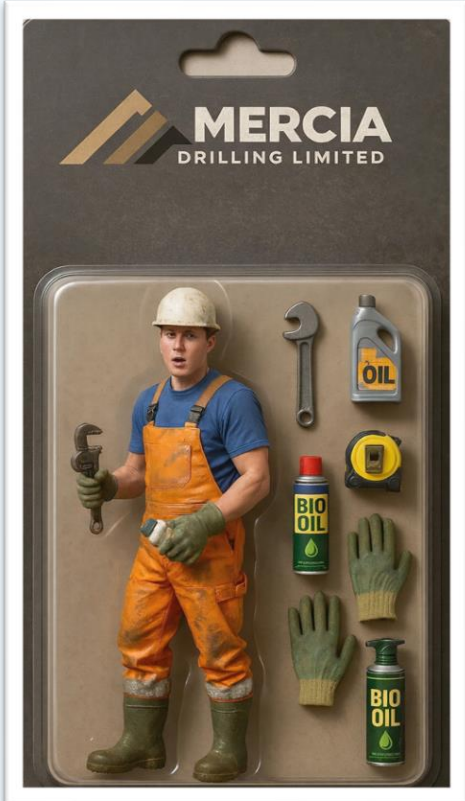

Groundwater & Gas Monitoring Installations

Mercia Drilling Limited installs high-quality monitoring systems tailored to each site.

Services include:

- Groundwater monitoring wells
- Gas monitoring wells
- Combined gas and groundwater installations
- Installations are completed in accordance with current guidance and best practice to ensure long-term reliability and accurate data collection.

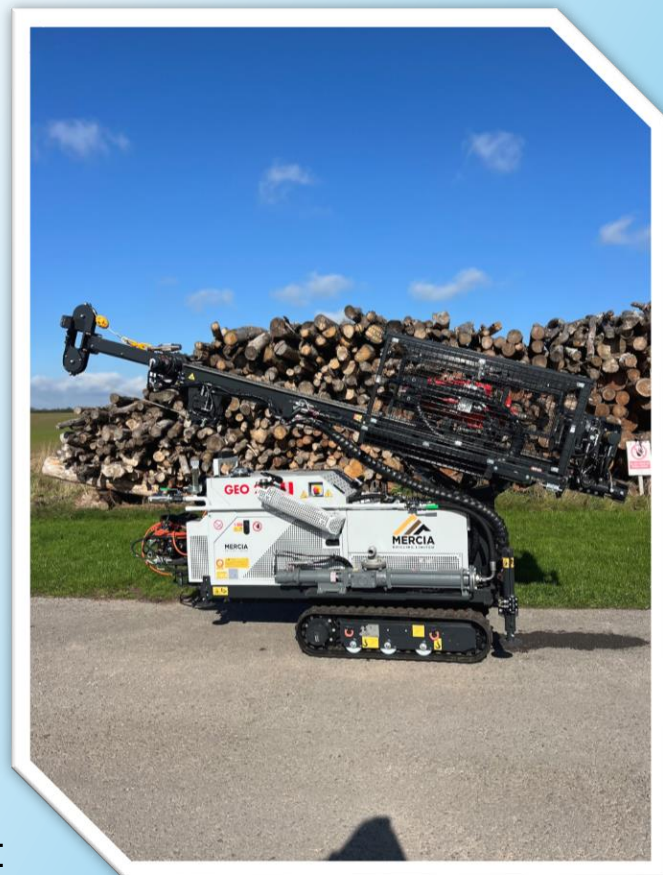

Health, Safety & Quality

Health and safety are central to everything we do. Mercia Drilling Limited operates robust safety systems and risk management procedures to ensure:

- Safe working practices on every site
- Fully trained and competent operatives
- Compliance with CDM Regulations and industry standards
- Quality assurance underpins all our work, ensuring consistent, accurate, and dependable results for our clients.

Why Choose Mercia Drilling Limited?

- Experienced geotechnical drilling specialists
- Modern, versatile drilling equipment
- Flexible approach tailored to each project
- Commitment to safety, quality, and reliability
- Trusted support from site investigation through to completion

Certification held (but not limited to):

NVQ level 2, DBS, BPSS, CSCS, First aid, Manual handling and EUSR
