Group

Toolbar:
Ribbon (Sketch): Draw > Edit > Group
Ribbon (Advanced): Edit > Modify > Group
Menu (Legacy): Modify >Group
Keyboard: MS_GROUP

Function

Easily group items together for quick selection and modifications such as move, rotate, and copy.

Procedure

There are two methods to group objects:

1. Select multiple objects in the drawing area then select the Group button.

2. Select the Group button then select the objects to group and hit enter.

If a group already exists, additional objects can be added to the initial group.

Once a group is selected, all objects in the group will highlight when selected. Each item will still have separate grips that can be adjusted.
