

Ungroup

Toolbar: 

Ribbon (Sketch): Draw > Edit > Ungroup

Ribbon (Advanced): Edit > Modify > Ungroup

Menu (Legacy): Modify > Ungroup

Keyboard: MS_UNGROUP

Function

Easily revert groups back to individual objects.

Procedure

There are two methods to ungroup objects:

1. Select the group in the drawing area then select the Ungroup button.
2. Select the Ungroup button then select the group and hit enter.

If a group is made up of multiple groups, the ungroup will do one group at a time.

Once a group is ungrouped, each object will highlight when selected independently.

Note: the ungroup command is different from explode. Explode goes one step further and "explodes" an object into the entities that make it up.
