

WEEPHOLES

A CRITICAL COMPONENT OF PRECAST HOLLOWCORE PLANK

A SILENT THREAT TO YOUR BUILDING

Water intrusion is a silent threat to your building and can be detrimental to total cost, schedule, and the quality of your building. It is estimated that 80-90% of all construction litigation is due to moisture issues.

Water is perhaps one of the leading causes of building damage, American Society for Testing and Materials states "Except for structural errors, about 90% of all building construction problems are associated with water in some way" Water intrusion claims are the most expensive type of insurance claim and damages are often far more extensive than they first appear. Water intrusion can threaten the health of future occupants and during the construction phase damage materials, finishes and equipment.

"PREVENTION IS BETTER THAN THE CURE"

A contractor's inability or unwillingness to protect installed work and stored material can have severe consequences. Negligence on a Contractor's part to mitigate damages can result in an insurance claim being denied.

BRUNTCO

YOUR FIRST LINE OF DEFENSE AGAINST WATER INTRUSION

ONE POINT OF WEAKNESS

It only takes one point of weakness to impact the viability of an entire structure

PLAN YOUR BUILDING PROACTIVELY NOT REACTIVELY

Water Relief is one of the most important functions that a contractor can address. The consequences of water infiltration are far-reaching and your risk is amplified when water builds up in Hollowcore planks.

BEFORE STARTING CONSTRUCTION

Contact BRUNTCO, LLC to add an additional layer of prevention to your project, with the addition of weephole drilling.
