

# LANTERN RIDGE ARB – FYPON RESOURCE

## 9" CROSSHEADS

Our community features 9" Crossheads w/ Trim Strip. These are found above your windows, main door and garage door.

Use product code: WCH-"BASE WIDTH"-X9T. Measure the "Base Width" of your existing crosshead or the edge-to-edge of the top of your window, door, or garage door to ascertain the correct size needed. Insert the "BASE WIDTH" measurement in the above product code. For example, your measurement is 80", then the product code would be WCH80X9T.

## ACORN PEDIMENTS

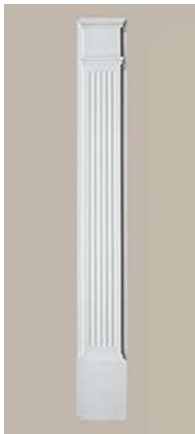

These are found above some homes front door/main entrance.

Measure the overall width of your front/main entrance. The end to end measurement will match the Overall Width measurement of the Acorn Pediment. Use product code: AP98 for overall width of 99 1/8"; AP91 for overall width of 92 1/8"; AP86 for overall width 87 1/4"; or use your custom overall width measurement and contact the supplier for your specific needs.

## FLUTED & PLAIN PILASTERS

These are found at the front door/main entrance. Plain pilasters have a flat surface in the main body, while fluted have vertical channels. Always select a "like-kind" replacement for your home.

Standard height is 90". Common widths for our neighborhood is 7", 8", or 9". You should measure your existing pilasters, if available. In cases where you may find a width size "in between", use the greater width replacement as it may be possible to trim to fit.

## LOCAL RETAILERS FOR FYPON PRODUCTS

Fypon may carry additional Architectural products needed for your home. The following retailer may assist you further in finalizing measurements, selecting, and ordering your Fypon products.
