THE BENEFITS OF FEEDING HERBS TO HORSES

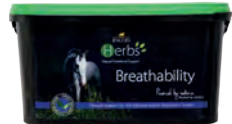

A key part of the horse's evolutionary diet, herbs are distinctly absent from modern day pastures. Herbs are now gaining renewed popularity & interest amongst horse owners, as trends revert back to a more natural approach to management.

Herbs are a natural source of many unique benefits. If horses were offered free choice of Herbs in a natural grazing environment, they would instinctively seek out specific plants, dependent on their circumstance.

Powered by nature.
