## HeavyFoot Weight Product

## Assemble Instructions

### Items in the box:

- 8.50 x 6 x 3" weight that is 46 pounds.
- 14.88-inch-long stake.
- 8.13 lock that goes through the weight in the stake.

### Item you will need:

- You only need a hammer or mallet

### Instructions:

1. Remove weight from the box and set it down where you want to assemble.
2. Take the stake out of the box and put it in the top of the weight and hammer through. Once the stake is all the way through, make sure that the opening of the stake faces the opening of the hole so you can put the lock through both the weight and the stake to lock them together.
3. Take the lock and pullout the piece at the bottom of the lock so that you can put it through the weight in the stake. Once you have put the lock through the weight in the stake, put the end piece lock back on and it will hold everything together.
4. To remove, just do the opposite. The stake will pullout fairly easy with some extra force.

**WARNING:** This is not a toy or weapon. Please use the HeavyFoot Weight the way it was meant to be used. Please keep away from kids and handle with care.

The HeavyFoot Weight can be used for bounce houses, tents, trampolines, awnings, RVs, and it's a universal anchor for anything you want to hold in place to keep it from going airborne or just anchoring it down.
