SG Diversity- SG12211199692528

Disabled Owned Business Enterprise, LGBTQ,
Minority Owned, Small Business, Small
Disadvantaged Business, Woman Owned.

NAICS: 423710,7999,3192,3315,3429,2499,3462,50
91,5999,2394.

40lbs,12lbs and 5lbs

Current Service Area 4 employees

Nevada

Able to service any area in the United State, and
International

Who We Are:

HeavyFoot Weight was invented because of bounce houses going airborne and children being injured or killed. Della Washington invented the HeavyFoot Weight to find a solution for airborne problems. We invented a way to secure bounce houses and event tents to prevent them from blowing away or causing harm. Our design saves time and effort by ensuring that you're inflatable is set and securely in place.

Perfect for rental companies, households, and businesses that utilize inflatable products or tents! HeavyFoot Weight is a universal tool to anchor items down with a weight and stake for double duty security.

Core Competencies:

Provides an effective way to stabilize inflatable rentals or tents • Offers an improved alternative to traditional anchors and weights • Prevents inflatables from becoming airborne and causing injuries or damage • Enhances safety • Convenient and easy to use • Practical and portable design • Ideal for rental companies, households and businesses that utilize inflatable products or tents

Differentiators:

We wanted to create a way to secure a bounce house rental and prevent it from blowing away, so we invented this. "My design saves time and effort, and it ensures that the inflatable can be easily set up and secured in place."

It's easy to set up a tent without having to angle the stake, just hammer the stake through the weight and lock them together and you can strap a rope on the handle(s). Stakes on their own can be weak or the big ones are hard to pull from the ground and can puncher gas lines and electric wires.

They are also easy to remove when you're ready to pack up
