

Environmental Policy

EAU Mining will protect and conserve the environment for future generations while responsibly developing mineral wealth for the benefit of our stakeholders and shareholders. The Company will drive continuous improvement and excellence in environmental management and performance and to fulfill this commitment will:

- Utilize an Environmental Management System that ensures assessment, prioritization, planning, implementation, monitoring, and review
- Comply with host country laws and regulations, augmenting these with appropriate international and sector best practices for environmental management
- Work with stakeholder communities with respect to the environmental impacts of our business activities in the local, regional and national context
- Communicate the Company commitment to excellence in environmental management to our workforce, stakeholder communities and host government
- Avoid causing or contributing to adverse human rights impacts through our business activities and will remedy such impacts if they occur
- Prevent the pollution of air, land and water and implement appropriate waste management practices
- Make strident efforts to be energy efficient and actively restrict the use of fossil fuels
- Ensure accessible mechanisms are in place for stakeholders to raise grievances and seek remedy for any environmental issues related to human rights
- Budget the necessary financial resources to ensure the Company can meet its environmental obligations including reclamation and closure
- Routinely set and review environmental targets and performance within a framework of continuous improvement
- Publicly communicate on environmental policies, procedures and performance through the annual Sustainability Reports as well as ongoing engagement with stakeholder communities
