

2024 Aquatic Invasive Species Treatment Notice and Waiver Form Spring Lake Property Owners

The Spring Lake Association (SLA) in cooperation with the Prior Lake Spring Lake Watershed District (PLSLWD) will be surveying Spring Lake in early April for Curly Leaf Pondweed (CLP). If CLP is discovered, treatment will occur in late April. In addition, a follow up survey will be done later this summer to determine if further treatment is required for Eurasian Water Milfoil (EWM). Both CLP and EWM are non-native and invasive species.

Both surveys and treatments, if needed, will occur in select areas in Spring Lake. If treatment is deemed necessary near shore, shore owners will be contacted. This treatment, if conducted, does not replace the treatment shore owners may use to control native aquatic plants which may interfere with open water and recreation on their shoreline.

Regarding the treatment if deemed necessary:

| | |
|---|--|
| Proposed Timing for Treatment: | April-August 2024 |
| Proposed Target Plant Species: | Curly Leaf Pondweed & Eurasian Water Milfoil |
| Method of Control or Product used: | The Environmental Protection Agency (EPA) and Minnesota Department of Natural Resources (DNR) approved herbicides will be used in invested areas and applied at or less than the approved application rates. |

If you do **NOT want treatment** to occur within your property's shoreline, please fill out the form below and mail it to the address below or e-mail it to board.sla@gmail.org by **April 8, 2024**.

Spring Lake Association
P.O. Box 631, Prior Lake, MN 55372
www.SpringLakeAssociation.org

I request that **no herbicide treatment** occur adjacent to our shoreline property.
