

General Safety Requirements

Ensuring Safety in Various Environments

Introduction

RRC use is a simple process that be used after the completion of the accredited RRC training courses provided by Rock Removal Solutions Inc. Possession of a shot firers ticket is not a prerequisite for personnel to become accredited in the of the RRC product.

Because of the UN 1.4S classification assigned to RRC, the handling of the Rock Removal Cartridges is very safe and harmless in an unconfined state. However, in the interest of employee safety the following should be adhered to:

Workplace Safety

Workplace safety is crucial for the well-being of employees and the efficiency of operations. Employers must implement and enforce safety regulations to minimize risks. Here are some key workplace safety requirements:

1. Risk Assessment

Conduct regular risk assessments to identify potential hazards. Evaluate the likelihood and severity of risks and implement measures to mitigate them.

2. Safety Training

Product to only be used by those who have completed the accredited training provided by Rock Removal Solutions or their designated trainers in field.

3. Personal Protective Equipment (PPE)

Following PPE should be utilized to ensure employees safety:

- Safety Gloves
- Ear Protection
- Safety Helmet
- Safety Glasses
- Work boots
