RRC come in a range of sizes and weights depending on the application.

CARTRIDGE DIAMETER (mm)	CARTRIDGE MASS (grams)	RECOMMENDED HOLE DIAMETER (mm)	APPLICATION
27.5	20	32	
	40		Mining and Civil works
	100		
42	100	45	Mining and Civil works
	200		Narrow-vein Mining Civil Tunnelling
60	300	64	Mining works
	500		

The RRC is simply a hollow plastic casing that holds the propellant. The casing is initially open at one end allowing it to be filled with propellant. The open end is then closed with a small cap. The other end of the casing is machined into a flat cap allowing the stemming to hold pressure down when the cartridge is initiated.

The casing and cap are made of an injection moulded medium-density polypropylene (HDPP).
