

Biological Services

Prevent Avian Bird Flu

Ensure safe and effective large-area disinfection with the ST100. Utilizing advanced biological disinfection techniques, the ST100 operates with or without chemicals. Our Wasp Agri technology generates ozonated water on-site, which is then delivered by aerial drones or hose-down systems. The 10-micron sprayers create a fine mist, thoroughly penetrating hard-to-reach areas over buildings and fields. Ideal for comprehensive disinfection of agricultural environments.

Signs of Bird FLU

Increase in bird death
or several birds affected

Closed, excessively
watery eyes

Lethargy, depression,
unresponsiveness

Loss of balance/tremors

Drooping wings /
dragging legs

Twisting of head and neck

Swelling/blue discoloration
of comb and wattles

Haemorrhages on shanks of
legs and under skin of neck

Loss of appetite /
change in water
consumption

Respiratory distress

Fever/Body temperature rise

Reduction in egg production
