ANTIMONY RESOURCES CORP.

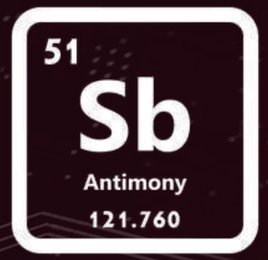
NORTH AMERICAN ANTIMONY EXPLORATION

FORWARD LOOKING STATEMENTS

Certain statements contained in this presentation constitute forward-looking statements. These statements relate to future events, the future performance, business prospects or opportunities of Antimony Resources Corp. (the “Company”), or possible events, conditions or financial performance that is based on assumptions about future economic conditions and courses of action and includes future oriented financial information with respect to prospective financial performance, financial position or cash flows that is presented either as a forecast or a projection. . All statements other than statements of historical fact may be forward looking statements. Forward looking statements are often, but not always, identified using words such as "seek", "anticipate", "plan", “developing“, "estimate", "expect, "may", "will", "project", "predict", "potential", "targeting", "intend", "could", "might", "should", "believe“, “identify”, “developing”, and similar expressions. These statements involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in such forward looking statements. The Corporation believes that the expectations reflected in those forward-looking statements are reasonable, but no assurance can be given that these expectations will prove to be correct and such forward-looking statements should not be unduly relied upon. These statements speak only as of the date specified. The Corporation does not intend, and does not assume any obligation, to update these forward-looking statements. These forward-looking statements involve risks and uncertainties relating to, among other things, results of exploration activities, the Corporation's limited experience with development-stage mining operations, uninsured risks, regulatory changes, defects in title, availability of materials and equipment, timeliness of government approvals, changes in commodity and, particularly, copper prices, actual performance of facilities, equipment and processes relative to specifications and expectations and unanticipated environmental impacts on operations. Actual results may differ materially from those expressed or implied by such forward-looking statements.

HISTORICAL RESULTS DISCLAIMER THE RESULTS DISCLOSED IN THIS PRESENTATION ARE HISTORICAL IN NATURE. ANTIMONY RESOURCES CORP. HAS NOT RECALCULATED ANY MINERAL RESOURCES, REVIEWED ANY QUALITY CONTROL SAMPLES, OR INTEGRATED THE QUALITY OF DATASETS AND CANNOT COMMENT ON THE RELEVANCE OR RELIABILITY OF SUCH INFORMATION. Technical information in this presentation has been reviewed and approved by James R Atkinson, M. Sc., P. Geo., Certified Professional Geologist who is a Qualified Person in accordance with NI 43-101 reporting standards. The historical information has been reviewed by James Atkinson P. Geo. The information is considered reliable as far as can be determined but should not be relied upon.

ANTIMONY



Industrial Applications:

- *Military Usage:* Used in ammunition, night vision goggles, communication equipment.
- *Flame Retardants*: Used in plastics, textiles, and electronics to enhance fire resistance by slowing or preventing combustion.
- *Batteries*: Essential for lead-acid batteries, commonly used in vehicles and backup power systems.
- *Semiconductors*: Utilized in microelectronics for diodes and infrared detectors.

Geopolitical & Supply Chain Importance:

- Over 70% of global antimony production comes from China, leading to concerns about supply chain security.
- Recognized as a critical mineral by the U.S., EU, and other major economies due to its industrial importance and limited global sources.
- Growing geopolitical tensions emphasize the need for independent sources of antimony to secure manufacturing and defense applications

.

WHY ANTIMONY?

- China announced antimony export restrictions which took effect on Sept. 15, 2024*, which are expected to have significant implications for the global antimony supply chain.
- An extreme supply shortage since April has led to the sharpest price rally ever recorded in the antimony.
- Antimony metal prices in Rotterdam increased at their fastest rate in more than 40 years in the week to May 1st.

*Source: Reuters, Aug. 28, 2024

ESSENTIAL IN MILITARY & DEFENSE

- Antimony is an essential material in the military and defense sectors due to its unique properties and versatile applications.
- It is used in the production of flame-retardant fabrics, which are crucial for the safety of military personnel. Additionally, antimony is a key component in communication equipment, night vision goggles, ammunition, and laser sighting devices.
- Its ability to enhance the durability and performance of these critical tools makes it indispensable for modern defense strategies.
- The demand for antimony in military applications is expected to rise as global geopolitical tensions and the need for advanced defense technologies continue to grow.

DRIVING ENERGY STORAGE & GRID STABILITY

- Antimony plays a crucial role in the power grid and power delivery systems, particularly in the development of advanced energy storage solutions.
- Its unique properties, such as heat resistance make it an essential component in modern battery technologies.
- Antimony is used in molten salt batteries, which offer reliable, low-cost, and long-lasting energy storage solutions.
- As the demand for renewable energy and efficient energy storage continues to grow, antimony's importance in the power grid and power delivery systems is expected to increase significantly.

SEMICONDUCTOR MANUFACTURING

Antimony is a critical element in the production of electrical components, playing a vital role in enhancing the performance and efficiency of semiconductor devices.

This makes it invaluable for applications such as infrared detectors, thermal imaging cameras, and optoelectronic devices. As the demand for advanced semiconductor technologies continues to grow, antimony's importance in the production of electrical components is expected to increase significantly.

WHERE IS ANTIMONY?

- Projects located in New Brunswick, Canada – Past home of North Americas only Primary Antimony Producer.
- One of the best jurisdictions in Canada for exploration and development.
- The Department of Mines in NB has completed regional surveys including Airborne Geophysics, LiDAR, Till sampling and has completed detailed geological mapping across the province.
- We have access to a very extensive database of past work even though the mineralization has only been explored since about 2008.

NEW BRUNSWICK, CANADA

THE PROJECT

BALD HILL

- Located approximately equal distance from Fredericton, Sussex and St John, New Brunswick.
- Approximately 1,100 hectares in 46 claims.
- Access by provincial and regional highways and logging and farming roads.
- Deep sea port 45 kilometers away from project

PROJECT DETAILS

BALD HILL

- Bald Hill is a known high grade antimony deposit in southern New Brunswick.
- Past work including drilling has outlined an antimony deposit over 500 meters long.
- **Historical NI-43-101 Technical Report:**
  - Potential quantity and grade of the drilled area, which is the target of further exploration, is in the 725,000 to 1,000,000 tonne range grading 4.11% to 5.32% Sb (~30,000 to 40,000 tonnes contained antimony).
  - Historical metallurgical test work outlined 96% recovery.

- NATIONAL INSTRUMENT 43-101 TECHNICAL REPORT BALD HILL ANTIMONY PROJECT SOUTHERN NEW BRUNSWICK, CANADA prepared by: Conestoga-Rovers & Associates MAY 2010 REF. NO. 070813
- Antimony Resources Corp. has not completed enough work to confirm this estimate. The potential quantity and grade are conceptual in nature as there has been insufficient exploration to define a mineral resource, and it is uncertain if further exploration will result in the target being delineated as a mineral resource.

HIGHEST GRADE ANTOMINY DRILL HOLE IN NORTH AMERICA

- Drill Hole BH-25-04 returned **4.17% Sb over 7.40 meters** at a depth of 106.6 to 114.0 meters including **three zones of massive Stibnite** which returned **28.8% Sb, 21.9 % Sb, and 17.9% Sb respectively**

- Drill Hole BH-25-03 returned **2.76% Antimony (Sb) over 2.8 meters** from 78.2 m to 81.0 meters (m) depth including 19.0% Sb from 78.2 m to 78.6 m depth.

Deposit: Three antimony bearing breccias and hydrothermal vein zones

Mineralization: Defined over 700 meters strike length to a depth of 300 meters with intersections another 800 m south

Antimony Resources Corp. **(CSE: ATMY) (FSE: K8J0)**

NEW DISCOVERY

- Trenching in 2014 discovered new area of antimony mineralization - 9.04 % Sb over 2.6m including 12.32 % over 1.7m from channel sampling.
- High-grade boulders (up to 48% Sb in till profile)
- Located ~ 1.0 km along trend to the southeast of the Bald Hill deposit
- Drilling confirmed the presence of antimony mineralization in veins and breccia.

Technical information in this presentation has been reviewed and approved by James R Atkinson, M. Sc., P. Geo., Certified Professional Geologist who is a Qualified Person in accordance with NI 43-101 reporting standards. The historical information has been reviewed by James Atkinson P. Geo. EXPLORATION PROGRAM 2025

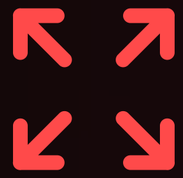
Work to include relogging approximately 2500 m of the 5400m of core in storage in Sussex



At least 2,500m of drilling to expand Main Zone and explore South Area and veins to the east.

Prospecting and mapping to supplement the past work including excellent regional mapping by NB Geology survey

Antimony Resources Corp. (CSE: ATMY) (FSE: K8J0)

EXPLORATION PROGRAM 2025

Massive antimony bearing mineralization in drill core intersected in approximately 80% of drill holes including BH-25-03 and 04 as shown in the photos below

DRILL HOLE BH-25-05 HAD MASSIVE ANTIMONY BEARING STIBNITE IDENTIFIED OVER 20 METERS

Antimony Resources Corp. (CSE: ATMY) (FSE: K8J0)

CAP TABLE

Common Shares	55,819,250
Warrants	9,976,250
RSU/Options	10,880,000
Fully Diluted	76,675,500

Institutional Holdings: 12M

Major Shareholders & Management: 15M

WHY ANTIMONY RESOURCES?

Experienced Management

- James Atkinson was the Chief Geologist at the St George Antimony Mine in New Brunswick which supplied up to 4% of the world's antimony demand.

- Track record of raising millions in financing for past companies.

- Over 100 years of experience in exploration, mining and finance.

Location!

- New Brunswick one of the best placed to explore in Canada

- Close to infrastructure including ports, highways and power

- Year round exploration Local contractors and drillers.

Antimony Resources Corp. (CSE: ATMY) (FSE: K8J0)

MANAGEMENT TEAM

James R. Atkinson, MSc., P. Geo.

CEO & Director

Mr. Atkinson is an experienced exploration geologist and project manager with over 45 years of experience. He was the Head Geologist at the Lake George Antimony Mine in New Brunswick, which was the only producing Antimony mine in North America and produced as much as 4% of the world's Antimony demand. Mr. Atkinson has spent his career in both mineral exploration and mining and in the environmental field attaining positions of Vice President, Exploration Manager and Regional Manager with junior and major mining companies such as Newmont Corporation (TSX: NGT), BHP Group Ltd. (NYSE: BHP) and Agnico Eagle Mines Ltd (TSX: AEM). He has reviewed, evaluated and acquired projects around the world and recently has also been part of the team responsible for mergers and acquisitions at Americas Gold and Silver Corp. (TSX: USA) (NYSE: USAS). He has worked with investors to form and run junior exploration companies. In the area of mineral exploration, he has designed and managed multi-million-dollar programs searching for and discovering various commodities including industrial minerals. These programs comprised of up to 100 staff and involved geophysical, geochemical and drilling programs as well as prospecting and geological mapping. He has negotiated option and purchase deals for mineral properties.

MANAGEMENT TEAM

Sheryl Jones

CFO and Director

Ms. Jones is a seasoned accountant with over 30 years of experience specializing in financial reporting for TSXV - listed companies. She provides comprehensive accounting, management advisory, and financial disclosure services to the Company

Rodney Stevens, CFA

Director

Mr. Stevens is a CFA charter holder with over a decade of experience in the capital markets, first as an investment analyst with Salman Partners Inc., then as a merchant and investment banker. While at Salman Partners, he became a top-rated analyst by StarMine on July 17, 2007. Mr. Stevens was also a Portfolio Manager registered with Wolverton Securities Ltd. and over the course of his career, he has been instrumental in assisting in financings and M&A activity worth over $1 billion in transaction value.
