Unique power distribution based on the visual needs of drivers

Clarion PAL Drive lenses have a unique power distribution based on the way we see while driving. They have been developed to maximize the near and mid-range vision zones.

Features **Multifocal** ✓

Near vision	<div><div></div></div>	25%
Intermediate	<div><div></div></div>	65%
Far vision	<div><div></div></div>	99%
Aberration	<div><div></div></div>	30%

Digital devices	<div><div></div></div>	23%
Sports	<div><div></div></div>	82%
Driving	<div><div></div></div>	99%

Clarion PAL Drive lens Benefits

01. Progression profile:

This lens incorporates extra negative power (up to 0.25 D) in the upper area of the lens to compensate for the effects of night myopia.

02. Unwanted astigmatism:

Clarion PAL Drive lenses have a maximum astigmatism level 14.6% lower than that of general-use premium progressive lenses. This improves vision in the peripheral areas of the lens and increases the visual range.

03. Unique Configuration:

Clarion PAL Drive lenses are 70% wider in the distance and 45% in the upper-intermediate when compared to premium general-use lenses. Wearers will enjoy expanded views of the road, dashboard, and mirrors.

04. Greater Visuals

Greater visual acuity for easy focus and more agile eye movement.

05. Improve Visuals

- Improves the visual experience of the wearer when driving in daytime and nighttime conditions.

06. Compensates night myopia

- Compensates for the effects of night myopia with a unique zone to provide better focus.
