

AI Writing Evaluation Sample - Descriptive Writing Annotation •

Original Text:

"The ocean was big and blue. The waves made sound. It was nice."

Evaluation:

GRAMMAR (4/5)

Minor plural issue in "waves made sound" → should read "waves made sounds" → otherwise mechanically sound.

CLARITY (1/5)

Vague references → reader can't visualize scene → specify which ocean, what kind of sounds, and what "nice" means to you.

TONE (1/5)

Flat and emotionless → misses opportunity to evoke sensory experience → use vivid, sensory language that conveys your emotional state.

STRUCTURE (1/5)

Simple repetitive syntax ("The ocean was... The waves made...") → reads like early-stage writing → vary sentence length and rhythm for flow.

ENGAGEMENT (1/5)

No sensory or emotional hook → reader remains detached → describe what you felt, saw, and heard to invite immersion.

Suggested Revision:

"As I sat cross-legged on my blue striped beach blanket, I was in awe of the bejeweled blue, green, and turquoise hues of the Caribbean Sea. The water was calm, lapping peacefully in gentle rhythmic waves. It was the most serene and beautiful afternoon."

Purpose: •

Demonstrates my process for refining AI-generated descriptive text through sensory detail, tone elevation, and structural variation to create more immersive, emotionally resonant writing.
