

# Focus on your clients, not your phone system

## Your phone system keeps your firm connected

Your firm advises and represents clients, which makes communication systems a critical part of your business. And with lawyers and associates working both in the office and on the go, your phone system must support their needs wherever they are. You don't need a lot of fancy bells and whistles, but you do want high quality—in both service and equipment—and simplified management for it all.

## Get the system that understands your needs

You're not just any business—as a law firm, you have some specific requirements to support the nature of your operations. For example, assistants need to be able to answer incoming calls for each attorney. Your attorneys need to be able to use their mobile phones for calls and texting without divulging their personal cell numbers. If you have multiple offices, you need to enable easy inter-office communications with simplified management, and if you run a call center, you need to ensure you never miss a call. Our cloud-based phone system provides you with the quality and features you need, delivered cost-effectively and with simplified management.
