

Our Manufacturer

Michael Davis graduated College with a degree in Physics and a minor in electronic engineering.

His first use of computers was a government computer comprised of five rooms full of 6400 vacuum tubes studying missile acceleration and velocity at Point Mugu Naval Air Station while in college.

After college Michael was a Rocket Scientist working for Rocketdyne and NASA designing rocket engines to send astronauts to the moon.

Next in the life of a Rocket Scientist, Michael owned a company which installed and operated over 1000 commercial windmills, his company installed the first commercial windmills in the United States.

Which brings us to now: Michael was the first manufacturer of PEMF devices in the United States over 20 years ago. He is the largest manufacturer of PEMF devices in the United States, and the only manufacturer who has product liability insurance.
