

What's Unique About Solei?

Solei performs 2 primary functions in pool water:

1. Allows you to use the 'power of the sun' for continuous oxidation.
Replaces preventative, maintenance shock treatments.
2. A natural and better replacement for traditional chlorine stabilizer.
Never add stabilizer again.

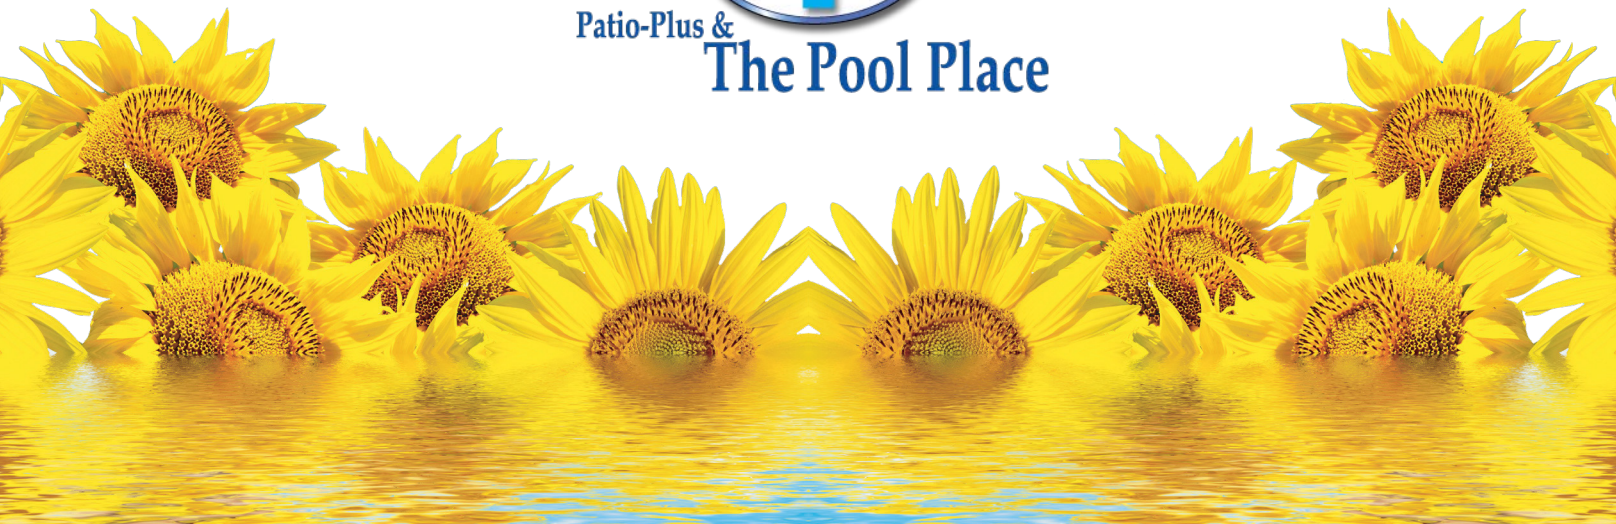

Here's Why You're Going to Love Solei

- A natural product that uses UV from sunlight to produce powerful Hydroxyl Radicals for more sparkling, clearer water.
- No more preventative, maintenance shock treatments.
- No more additions of Stabilizer.

Note: Solei is not a sanitizer, disinfectant or an algicide. It is for oxidizing shock treatment only and may be used where chlorine or bromine is the primary disinfecting agent.

The Pool Place

Here's How It Works!

Solei uses sunlight to produce powerful Hydroxyl Radicals for continuous oxidation and clearer water. For the techie explanation, here ya go!

Here's How It is Applied:

- 3.78 Litres (1 bottle) per 80,000 litres – initial application.
- 1 litre (approx. 1/4 bottle) per 80,000 litres - weekly maintenance.
- Regular maintenance additions will intensify the product's performance, leading to better and better results throughout the season.
- Apply directly to pool by pouring around edges or in front of returns.
