

The Pristiva Program - Instruction Sheet

For Existing Salt Pools: (conversion of an existing salt pool to Pristiva)

Thank you for purchasing the **Pristiva Program** from your **Dazzle™** provider. This program is designed to provide you the optimum results you are looking for from your salt water chlorinator as well as maintain and protect your pool and equipment from damage. And, best of all, it is **Guaranteed** to keep your pool water clear and algae-free all summer long and your pool and equipment free of unsightly and damaging stains and scale!

Prior to Using the Pristiva Program;

Properly balance your pool water – take a water sample to your **Dazzle™** professional for a complete step-by-step water test and analysis with the **Dazzle™ AquaAce** water analysis system.

In addition to testing and balancing your **Total Alkalinity, pH and Calcium Hardness**, your **Dazzle™** professional will also be able to identify other potential problems that could affect the overall performance and results you achieve. For example:

- **Phosphates** - if present, remove with **Dazzle™ Phos Cleanse**. Phosphates are problematic to salt water pools, leading to scale formation and the possibility of algae growths.
- **Stabilizer** – when maintained at recommended levels, the chlorine produced from your salt system stays in the water much longer, reducing demand on your chlorinator. When demand is reduced, your cell lasts longer, the negative effects of producing chlorine are reduced and maintenance is easier.

How to Use the Pristiva Program:

1. Initially, apply **Pristiva Primer**
 - a. Backwash or clean filter
 - b. With the pump running, slowly add contents of **Pristiva Primer** directly into skimmer
 - c. Use 1 bottle of **Pristiva Primer** per 22,500 litres of pool water.
 - d. Keep water circulating and do not backwash for minimum 6 hours

Once applied, **Pristiva Primer** builds a unique base of protection in your pool water that prevents stains and scale formation. **Pristiva Primer:**

- Is unparalleled in the prevention and control of stains, scale and corrosion
- Optimizes chlorine generator performance, controls scaling and extends cell life to reduce maintenance
- Establishes and maintains superior protection for heater, filter, piping, valves and all pool finishes

2. Circulate water and test the salt level. Apply **Pristiva Activator** to pool water as needed to achieve the proper salinity level, as recommended by the manufacturer of your salt water chlorinator. Apply **Pristiva Activator** by slowly pouring the product around the edges of the pool, preferably in the deep end. Avoid piling **Activator** in any given area. Use a pool brush to agitate any undissolved **Activator** until completely dissolved. Note: it may take up to 24 hours for the salinity to register accurately with the chlorinator.

Pristiva Activator;

- Is the highest quality salt blend product available
 - Replaces all other pool salts
 - Is the best safeguard y for your salt pool against staining, scaling and chlorine demand
 - Maximizes protection for all pool finishes
 - Reduces the need for additional chemicals
 - Creates clear, silky smooth pool water
 - Is fast dissolving, meaning less time applying and brushing
3. After applying **Pristiva Primer and/or Activator**, wait 1 hour and then shock the pool water with **Dazzle Ultra Shock** to establish a proper chlorine residual. Use 125 g per 10,000 litres. Apply slowly around the edges of the pool, brushing afterwards to ensure dissolving.
 4. Adjust the salt chlorinator setting to 100% to maintain a total chlorine residual of at least 1 ppm continuously.

Unconditional Pristiva Performance Guarantee: If you should get algae while using the *Pristiva Program*, *Dazzle™* and your local retailer will fix the problem at no cost to you. Performance Guaranteed! See your *Dazzle™* provider for more information.

Dazzle™ donates a percentage of sales from every pool and hot tub product toward helping to raise funds to provide African communities with a clean, renewable source of fresh drinking water by building and drilling wells in small villages through our *Share the Gift of Water Program*.
