

AWS GameDay - The New Frontier

Cornhuf Translator

The Mythical Research division located ancient unicorn texts and we think it's written in Cornhuf language.

Work together with your team and find out what the unicorns are trying to tell us. Teams are recommended to start with this Quest for team bonding and a quick win as a team.

Finding Monoceros

The Resourcing Department is trying to locate new mana sites in outer space.

In this Quest, teams will look for the Monoceros Constellation by using Machine Learning with Amazon SageMaker.

Mine Analyzer

The Data and Analytics Department is working on ways to process the vast amount of mana data being gathered.

In this Quest, teams will process data from the outer space using Amazon Kinesis services

Mana Processing

The Processing Department is responsible for handling the materials from the manufacturing operations.

In this Quest, teams will process Unicorn Mana in a modern-fashioned manner by using AWS Elastic MapReduce.

Rucinon Space Taste

The Unicorn Auditing Department is getting sent to space to taste test Rucinon.

In this Quest, teams will test their DevOps skills to deploy the Unicornus Operating System (UOS) in space and send unicorns there.

Unicorn Farm

The Unicorn Farm Department protects and develops the future fleet.

In this Quest, teams will use IoT services to help Unicorn.Rentals better manage its Unicorn Farm.
