## XCEL BIO IMPROVES CANNABIS OIL YIELD

Ready for harvest

After harvesting, analysis and comparisons were made between Xcelbio treated plants and non-treated plants:

- 37,5% higher yield of foliage and seed growth compared to non-treated plants.
- total cannabinoid content of treated plants was 33,5%, this is approximately 20% higher compared to non-treated plants.
- The highest ever average of total cannabinoids without Xcelbio was 28%.

Another very important benefit is that Xcelbio removes all biofilms and slimes in the feed lines and growing tanks, eliminating cleaning costs and the use of additional chemicals.
