## **Revolutions in World Prehistory**

by **Dr. Kyle P. Freund**

This presentation discusses “revolutionary” events in human prehistory spanning the past seven million years and highlights the various inventions and evolutionary developments that have shaped our species. It will be shown that human prehistory is dynamic, and archaeological evidence provides insight into what makes our species unique. Topics covered include the appearance of bipedality in our pre-human ancestors, the invention of stone tools, the emergence of artistic expression, and the “Neolithic Revolution” that saw the transition from a life of hunting-and-gathering to farming.

### **Dr. Freund Biography**

Dr. Freund is an Assistant Professor of Anthropology at Indian River State College (IRSC) in Fort Pierce, Florida. He was an undergraduate at the University of Florida and holds an M.A. from the University of South Florida. He completed his Ph.D. at McMaster University in Ontario, Canada and joined the faculty of IRSC in 2015. Professor Freund has been involved in multiple field projects throughout Italy, Greece, Turkey, Canada, and the United States, although his primary research centers on prehistoric farming communities of the Central Mediterranean. His specializations include stone tool analysis, ancient metallurgy, spatial statistics, and field survey.
