

BEYOND THE BEST PRODUCT IS THE RIGHT APPROACH

Pioneered and developed through international partnerships between Valent BioSciences and public health professionals, WALs is a revolutionary biorational application approach for controlling container mosquitoes in cryptic habitats. WALs has undergone intensive operational development and large-scale, multi-year field trials for over 20 years.

Incorporating WALs as part of your IVM program means you can be confident that you'll have the right tools in place to keep people safe from the threat of infectious disease.
