# We're 1 of 5 Vector Control Districts in Los Angeles County

## Primarily Urban

- 88 cities
  - **26 cities in our District**
- 10.4 million residents
  - **Two million in our District**
- 4,084 square miles
  - **287 sq. mi. in our District**

# We have an *Aedes* problem in Los Angeles County

- First large population of *Aedes albopictus* confirmed in 2011
- *Ae. aegypti* confirmed in 2014
- *Ae. notoscriptus* confirmed in 2014

# We have an *Aedes* problem in Los Angeles County

- New bite pressure resulted in increases of service requests (SRs)
- Stretched resources of our primary objectives to prevent West Nile virus transmission
- Operations staff needed assistance to divert education-heavy SRs to Communications/Outreach

The background is a dark blue gradient with a complex circuit board pattern of white lines and dots. Several semi-transparent icons are scattered across the background, including a pie chart, a bar chart, a clock, a gear, a checkmark inside a gear, a computer monitor, and a group of people. On the far left, a hand is visible, with the index finger pointing towards the text.

# Let's Automate Community-level Intervention (CLI) in 5 steps

# Step 1: Determine objectives of CLI

## Bite Back Program

- Give residents the knowledge they need to tackle *Aedes* mosquitoes on their properties and in their neighborhoods

# Step 2: Determine Details of Intake & Onboarding

Time to manually convert participant to next steps after intake: At least **15 minutes**

# Step 2: Determine Details of Intake & Onboarding

Automation tools saved staff 15 minutes of intake and onboarding time per person

# Step 3: Determine Participant Management

- Successful CLI holds participants accountable
- Determine data needed from participants to stay engaged with them

# Step 4: Determine Cost

Bite Back Program needs  
the capacity of one  
seasonal position  
equivalent

\$20,000/year

# Step 4: Determine Cost

Monday.com - \$468/year

Zapier - \$239/year

Mailchimp - \$120/year

Acuity Scheduler - \$378/year

**Total: \$1,205/year**

Automation tools saved cost of supporting  
Bite Back Program by 94%

# Step 5: Plan implementation

Do thorough testing  
before and during  
implementation

# Automation of Biting Back Results

1. Save 15 minutes/participant to convert from intake
2. Can run without staff present
3. Save cost of support by 94%
4. Reduced burden on field staff
