THE MISSING LINK

Why Enterprises Need an AI Integration Lab

Dr. Elizabeth M. Adams

THE PROBLEM

AI Adoption Is Fragmented

- Most AI initiatives begin with one visionary leader (CEO, CTO, CIO)
- Lack of cross-functional alignment leads to stalled pilots and siloed efforts
- No clear ownership across divisions and limited enterprise value
- Culture and readiness gaps slow momentum
- No change management strategy

THE SOLUTION

Introducing the AI Integration Lab

A time-bound, cross-functional lab embedded within the enterprise

Accelerates AI adoption by connecting strategy to execution

Aligns leadership, operations, and technology for scaled impact

Delivers measurable outcomes and enterprise-wide readiness

Led by an executive to ensure alignment, authority, and cross-functional accountability

www.mnrai.com

WHY TRADITIONAL MODELS DON'T DELIVER

Model	Limitation
AI Center of Excellence	Great for engagement and technical depth, but lacks business integration and execution authority
Digital Transformation Office	Broad scope dilutes focus; not tailored to AI deployment or cross-functional alignment
Chief AI Officer	Role-based influence often limited; lacks mandate to drive adoption across all business units

STRATEGIC IMPACT

What This Unlocks

1

Accelerated time-to-value for AI investments

2

Clear ownership and accountability across leadership

3

Scalable adoption across business units and functions

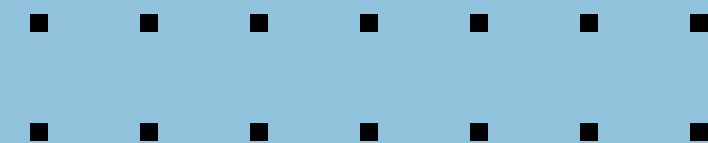

4

Increased confidence from investors and stakeholders

5

A repeatable model for enterprise-wide innovation
