

# *Sealing cracks in pavements is a preventive maintenance activity performed by most highway agencies and private owners*

### **What is crack sealing?**

Crack sealing is the process of placing a hot adhesive sealant into cracks on the pavement surface, preventing the infiltration of moisture and non-compressible materials into the pavement.

### **Is crack sealing effective?**

Yes, crack sealing is a cost-effective solution that can slow pavement's deterioration and extend its life

### **When to seal?**

Cracks sealing should be performed before a pavement becomes too distressed

### **How much additional life can you get from crack sealing?**

Crack sealing can easily add 3 to 5 years in service

### **Crack sealing can be used on**

- Asphalt pavements
- Concrete pavements

### **Typical application on**

- Freeways
- Local streets
- Parking lots
- Playcourts

**CLEAN BEFORE YOU SEAL**

*Cracks are inevitable. Neglect leads to accelerated cracking and potholing*

- A preventive maintenance treatment
- Protects pavements against deterioration
- Keeps water away from entering and weakening pavement structure
- Extends pavement life by 3-5 years
- Leads to significant cost savings

- We use industry standard equipment
- We use certified materials that meet/exceed ASTM specs
- We use hot rubberized/poly fiber asphalt crack filler
- Our staff are trained, qualified, experienced

- **Crack seal your pavement**
- **Prevent degradation**
- **Extend useful life**
- **Save money**
